Society,1987 *HRW Algebra One Interactions* ,199? Topological Quantum Computation Zhenghan Wang,2010
Topological quantum computation is a computational paradigm based on topological phases of matter which are governed by
topological quantum field theories In this approach information is stored in the lowest energy states of many anyon systems
and processed by braiding non abelian anyons The computational answer is accessed by bringing anyons together and
observing the result Besides its theoretical esthetic appeal the practical merit of the topological approach lies in its error
minimizing hypothetical hardware topological phases of matter are fault avoiding or deaf to most local noises and unitary
gates are implemented with exponential accuracy Experimental realizations are pursued in systems such as fractional
quantum Hall liquids and topological insulators This book expands on the author s CBMS lectures on knots and topological
quantum computing and is intended as a primer for mathematically inclined graduate students With an emphasis on
introducing basic notions and current research this book gives the first coherent account of the field covering a wide range of
topics Temperley Lieb Jones theory the quantum circuit model ribbon fusion category theory topological quantum field theory
anyon theory additive approximation of the Jones polynomial anyonic quantum computing models and mathematical models
