[Encyclopaedia of Mathematics](#) Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this

ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Geometries of Learning Pavan Turaga, Yunye Gong, P. Thomas Fletcher, Ajay Divakaran, 2025-04-25 Deep neural networks have demonstrated great success in many computer vision applications where intelligent recognition and analysis are performed based on high dimensional visual data However in contrast to the rapid development of advanced architectures and training schemes developments have been limited in the theory of analyzing deep neural networks and deep learning training through the lens of geometries The lack of such analysis prevents further understanding and affects the acceptance of deep neural networks for practical applications For example deep neural networks are often challenged by their vulnerability to adversarial attacks their lack of systematic guarantees on effectiveness and stability and their degraded generalization capability outside the distribution of training data

Numerical Mathematics and Advanced Applications F. Brezzi,A. Buffa,S. Corsaro,A. Murli,2012-12-06

Scientific computing is a fast growing and fast changing area whose applications to various branches of science engineering medicine economics and others are increasing in number and relevance every day There are two main reasons among others that make scientific computing change so rapidly One is the increasing number of different research areas beginning to make use of numerical simulation from nanotechnology to genomics from computer aided diagnosis and operations in medical applications which involve often complete simulations of parts of the human body to economics and finance Each new application and each new aspect of earlier applications draws heavily on the know how that has been acquired on other problems with similar mathematical features It has to be pointed out that the lofty perspective of mathematics succeeds quite often in finding connections among very different phenomena that turn out in the end to share the same mathematical and numerical structure In turn new applications contribute to the cross fertilization by sending back new interpretations and suggestions which are often useful in more classical applications All this creates a resonance effect that contributes greatly to the growth rate of the whole field
