Reliable Implementation of Real

Number Algorithms: Theory and Practice Peter Hertling,Christoph M. Hoffmann,Wolfram Luther,Nathalie

Revol,2008-08-06 A large amount of the capacity of today's computers is used for computations that can be described as computations involving real numbers In this book the focus is on a problem arising particularly in real number computations the problem of verifying reliable computations Since real numbers are objects containing an infinite amount of information they cannot be represented precisely on a computer This leads to the well known problems caused by unverified implementations of real number algorithms using finite precision While this is traditionally seen to be a problem in numerical mathematics there are also several scientific communities in computer science that are dealing with this problem This book is a follow up of the Dagstuhl Seminar 06021 on Reliable Implementation of Real Number Algorithms Theory and Practice which took place January 8-13 2006 It was intended to stimulate an exchange of ideas between the different communities that deal with the problem of reliable implementation of real number algorithms either from a theoretical or from a practical point of view Forty eight researchers from many different countries and many different disciplines gathered in the castle of Dagstuhl to exchange views and ideas in a relaxed atmosphere The program consisted of 35 talks of 30 minutes each and of three evening sessions with additional presentations and discussions There were also lively discussions about different theoretical models and practical approaches for reliable real number computations

Johnson,1976 This paper presents some elementary applications of Bayesian statistics to problems faced by wildlife biologists Bayesian confidence limits for frequency of occurrence are shown to be generally superior to classical confidence limits Population density can be estimated from

frequency data if the species is sparsely distributed relative to the size of the sample plot For other situations limits are developed based on the normal distribution and prior knowledge that density is non negative which insures that the lower confidence limit is non negative Conditions are describes under which Bayesian confidence limits are superior to those calculated with classical methods examples are also given on how prior knowledge of the density can be used to sharpen inferences drawn from a new sample

Fast Numerical Methods for Mixed-Integer Nonlinear Model-Predictive Control Christian Kirches, 2011-11-23 Christian Kirches develops a fast numerical algorithm of wide applicability that efficiently solves mixed integer nonlinear optimal control problems. He uses convexification and relaxation techniques to obtain computationally tractable reformulations for which feasibility and optimality certificates can be given even after discretization and rounding.

Airport Baggage Handling Systems Brahim Rekiek, 2023-10-19 The competition between airports demands higher quality services to satisfy passengers. A Baggage Handling System (BHS) serves functions such as baggage sorting, screening, and storage. A successful BHS means bags move between areas as travellers do. Handlers load, unload, and transfer bags between the airport's areas. Automation can save money and bring safety and operational benefits. Warehouses, as well as the automotive industry, are more advanced technologically in comparison to the airport, and especially the baggage handling business. The concept of the Baggage Factory (BF) is an approach based on Industry 4.0 that simplifies the processes from the moment passengers drop off their bags at check-in till the destination chutes, carousels, and so forth. *Airport Baggage Handling Systems: Using the Baggage Factory Approach to Support AI Optimisation Decisions and Design Processes* introduces the features of the BF concept and presents how BHS designers can use AI technology to tackle many BHS problems and concerns. The book bridges the gap between airport BHS designers and experts in AI and optimisation. It describes in detail the field of baggage handling using algorithms for sorting bags or optimising the flow. The way the systems are designed is discussed, and a behind-the-scenes look at the BHS industry and how it affects the daily lives of travellers is presented. International and multidisciplinary in approach, this book is an ideal resource for practitioners, students, and researchers involved in the air transportation industry. *Tourism Systems Engineering: Layout and Design* Artificial Intelligence, Assembly Automation, and Logistics fields.
