Helming,2008-07-15 **Infrasound Avalanche Monitoring System Research Evaluation** Maria Vyas,2009 Little Cottonwood Canyon Road SR 210 has one of the highest risks for avalanche activity for almost any road in North America Until recently UDOT staff members have generally relied on visual cues to know whether avalanche control operations have successfully triggered slides the same holds true for naturally occurring slides However in poor lighting or blizzard whiteout conditions staff cannot visually monitor whether control operations were successful or if there is still a risk of avalanche In 2006 UDOT installed an Infrasonic Avalanche Detection system to monitor three locations in Little Cottonwood Canyon The Infrasonic provides remote sensing of avalanche activity so that in poor visibility conditions UDOT staff members are aware of whether an avalanche risk remains or not The purpose of this research is to evaluate the performance and value of the Infrasonic and determine whether it increases the reliability of avalanche control operations thereby enhancing public safety

Handbook of Water and Wastewater Systems Protection Robert M. Clark,Simon Hakim,Avi Ostfeld,2011-09-01 Following the events of 9 11 the Administrator of the US Environmental Protection Agency created the Water Protection Task Force WPTF which identified water and wastewater systems as a major area of vulnerability to deliberate attack The WPTF suggested that there are steps that can be taken to reduce these vulnerabilities and to make it as difficult as possible for potential saboteurs to succeed The WPTF recommended that be scrutinized with renewed vigor to secure water and wastewater systems against these possible threats It also recommended that water and wastewater systems have a response plan in place in the event an act of terrorism occurs The WPTF identified water distribution networks as an area of special vulnerability and highlighted the need for rapid on line detection methods that are accurate and have a wide detection range As a result of these recommendations novel technologies from various fields of science and engineering are now addressing water security issues and water and wastewater utilities are looking for innovative solutions Once such technologies are available there will be a rapid implementation process that will present many business opportunities for the private sector However in addition to terrorist threats water and wastewater systems are inherently vulnerable to natural disasters such as earthquakes and floods This volume will address the problems associated with both intended terrorist attacks and natural disasters affecting water or wastewater systems The book is divided into parts based on the kinds of threats facing water and wastewater systems 1 a direct attack on water and wastewater infrastructure storage reservoirs and distribution and collection networks 2 a cyber attack disabling the functionality of the water and wastewater systems or taking over control of key components which might result in system failures and 3 a deliberate chemical or biological contaminant injection at one of the waterdistribution system s nodes It will examine unique plans technological and managerial innovations for protecting such systems and includes descriptions of projects that were implemented to respond to natural disasters Case studies are

presented that discuss existing projects and evaluate their performance with an emphasis on providing guidelines and techniques that can be implemented by water and wastewater planners and managers to deal with natural and manmade disasters should they occur
