Digital adaptation kit for antenatal care ,2021-02-18

Digital adaptation kit for postnatal care World Health Organization,2025-07-19

Digital Adaptation Kits (DAKs) are part of WHO's SMART guidelines initiative. This aims to ensure that the content of WHO's evidence-based guidelines is accurately reflected in the digital systems being used at country level. The DAKs provide software neutral operational and structured documentation based on WHO recommendations related to clinical care, health systems and use of data to systematically and transparently inform the design of digital systems. Standard components of each DAK include 1 linked health interventions and recommendations, 2 generic personas, 3 user scenarios, 4 generic business processes and workflows, 5 core data elements mapped to standard terminology codes (e.g. the international classification of diseases), 6 decision support, 7 programme indicators and 8 functional and non-functional requirements. This DAK focuses on PNC and aims to provide a common language across various audiences: maternal newborn infant and child health and other programme managers, software developers and implementers of digital systems to ensure a common understanding of the appropriate health information content within a defined health programme area as a mechanism to catalyse the effective use of these digital systems.

Distributed Simulation Okan Topçu, Umut Durak, Halit Oğuztüzün, Levent Yilmaz, 2016-01-27. This unique text reference provides a comprehensive review of distributed simulation (DS) from the perspective of Model Driven Engineering (MDE), illustrating how MDE affects the overall lifecycle of the simulation development process. Numerous practical case studies are included to demonstrate the utility and applicability of the methodology, many of which are developed from tools available to download from the public domain. Topics and features: Provides a thorough introduction to the fundamental concepts, principles and processes of modeling and simulation, MDE and high level architecture. Describes a road map for building a DS system in accordance with the MDE perspective and a technical framework for the development of conceptual models. Presents a focus on federate simulation environment architectures detailing a practical approach to the design of federations (i.e. simulation member design). Discusses the main activities related to scenario management in DS and explores the process of MDE based implementation, integration and testing. Reviews approaches to simulation evolution and modernization including architecture driven modernization for simulation modernization. Examines the potential synergies between the agent DS and MDE methodologies, suggesting avenues for future research at the intersection of these three fields. *Distributed Simulation: A Model Driven Engineering Approach* is an important resource for all researchers and practitioners involved in modeling and simulation and software engineering who may be interested in adopting MDE principles when developing complex DS systems.
