Across the industrialized West nonmarital birth relational stress multi partner fertility and relationship dissolution have increased producing a dramatic rise in single parenthood poverty and childhood risk This concentration of familial and economic risk accelerates socioeconomic inequality and retards intergenerational mobility Although the divide is most pronounced in the United States the same patterns now affect families throughout the Western world Across the European Union there are 9.2 million lone parents and just under half of their families live in poverty Tying the Knot demonstrates how today's family patterns are deeply rooted in long standing class based differences in family life and explains why these class based differences have accelerated It explains how the values that guide family law development inevitably reflect the world in which families live and develops a new family law capable of meeting the needs of twenty first century families The book will be of considerable interest to family specialists from a number of fields including law demography economics history political science public health social policy and sociology

Rethinking Climate Change, Conflict and Security Jan Selby, Clemens Hoffmann, 2017-10-02 Is global climate change likely to become a significant source of violent conflict and should it therefore be seen as a national security challenge Most Northern governments militaries think tanks and NGOs believe so as do many academic researchers on the grounds that increased temperatures changing precipitation patterns and rising sea levels will worsen existing social stresses especially within poor societies and marginal communities across Africa and Asia This book argues otherwise The first collection of its kind it brings together leading scholars of Anthropology Geography Development Studies and International Relations to provide a series of critical analyses of mainstream thinking on the climate security nexus It shows how policy discourse on climate conflict consistently misrepresents the causes of violence especially by obscuring its core political dimensions It demonstrates that quantitative research provides a flawed basis for understanding climate conflict linkages It argues that climate security discourse is in hoc with a range of questionable military authoritarian and developmental agendas And it reveals that the greening of global capitalism is

already having violent consequences across the global South Climate change the book argues does indeed have serious conflict and security implications but these are quite different from how they are usually imagined This book was published as a special issue of Geopolitics Key Determinants of National Development Kwaku Appiah-Adu, Mahamudu Bawumia, 2016-03-09 For those wishing to acquire knowledge on national development issues this comprehensive compendium traverses a spectrum of subjects that the audience ought to be well acquainted with The Editors provide instructive findings regarding national development economic growth and their determinants but they also offer historical perspectives on the subject and the implications for developing countries The book addresses a suite of critical themes regarded by development experts to be germane in considering the pertinence of policies and their effective execution These seven general thematic areas are explored Leadership governance policy and strategy Public sector and public financial management Culture institutions and people Natural resources Science technology and infrastructure Private sector and financial markets Marketing branding and service delivery This thematic approach enables the contributors to explore the impact of the constituents of each subject area on national development within the context of a developing economy The significance of the findings for the relevant stakeholders is consequently reviewed The combination of theory and practice makes the book and its contents unique
