Outdoor and environmental education By providing a collection of new research findings from many countries this book is a great resource for researchers and practitioners such as school college and university biology teachers around the world It is useful for training biology teachers and therefore valuable to teacher training institutions

Recent Advances in $\gamma\delta$ T Cell Biology: New Ligands, New Functions, and New Translational Perspectives Dieter Kabelitz, Julie

Dechanet-Merville, 2016-02-16 $\gamma\delta$ T cells are a small subset of T lymphocytes in the peripheral circulation but constitute a major T cell population at other anatomical localizations such as the epithelial tissues In contrast to conventional T cells the available number of germline genes coding for T cell receptor TCR variable elements of T cells is very small Moreover there is a preferential localization of T cells expressing given $V\gamma$ and $V\delta$ genes in certain tissues In humans T cells expressing the $V\gamma 9V\delta 2$ encoded TCR account for anywhere between 50 and 95% of peripheral blood T cells whereas cells expressing non $V\delta 2$ genes dominate in mucosal tissues In mice there is an ordered appearance of T cell waves during embryonic development resulting in preferential localization of T cells expressing distinct $V\gamma/V\delta$ genes in the skin the reproductive organs or gut epithelia The major function of T cells resides in local immunosurveillance and immune defense against infection and malignancy This is supported by the identification of ligands that are selectively recognized by the TCR As an example human $V\gamma 9V\delta 2$ T cells recognize phosphorylated metabolites phosphoantigens that are secreted by many pathogens but can also be overproduced by tumor cells providing a basis for a role of these T cells in both anti infective and anti tumor immunity Similarly the recognition of endothelial protein C receptor by human non $V\delta 2$ T cells has recently been identified to provide a link for the role for such T cells in immunity against epithelial tumor cells and cytomegalovirus infected endothelial cells In addition to classical functions such as cytokine production and cytotoxicity recent studies suggest that subsets of T cells can exert additional functions such as regulatory activity and quite surprisingly professional antigen presenting capacity It is currently not well known how this tremendous extent of functional plasticity is regulated and what is the extent of TCR ligand diversity Due to their non MHC restricted recognition of unusual stress associated ligands T cells have raised great interest as to their potential translational application in cell based immunotherapy Topics of this Research Focus include Molecular insights into the activation and differentiation requirements of T cells role of pyrophosphates and butyrophilin molecules for the activation of human T cells role of T cells in tumor immunity and in other infectious and non infectious diseases and many others We are most grateful to all colleagues who agreed to write a manuscript Thanks to their contributions this E book presents an up to date overview on many facets of the still exciting T cells Dieter Kabelitz Julie D chanet Merville

Biovalorisation of Wastes to Renewable Chemicals and Biofuels Navanietha Krishnaraj Rathinam, Rajesh Sani, 2019-10-15 Biovalorisation of Wastes to Renewable Chemicals and Biofuels addresses advanced technologies for converting waste to biofuels and value added products Biovalorisation has several advantages over conventional bioremediation processes as it helps reduce the costs of bioprocesses Examples are

provided of several successfully commercialized technologies giving insight into developing potential processes for biovalorisation of different wastes Different bioprocess strategies are discussed for valorising the wastes coming from the leather industry olive oil industry pulp and paper winery textile and food industries as well as aquaculture A section on biorefinery for hydrocarbons and emerging contaminants is included to cover concepts on biodesulfurization of petroleum wastes leaching of heavy metals from E waste and bioelectrochemical processes for CO₂ Chapters on algal biorefinery are also included to focus on the technologies for conversion of CO₂ sequestration and wastewater utilization Biovalorisation of Wastes to Renewable Chemicals and Biofuels can be used as course material for graduate students in chemical engineering chemistry and biotechnology and as a reference for industrial professionals and researchers who want to gain a basic understanding on the subject Integrative Computational Systems Biology Approaches in Immunology and Medicine Lars Kaderali,Fabian Theis,Esteban A. ,Youssef Roupheal,2024-06-11 Modern agriculture needs to review and broaden its practices and business models by integrating opportunities coming from different adjacent sectors and value chains including the bio based industry in a fully circular economy strategy Searching for new tools and technologies to increase crop productivity under optimal and sub optimal conditions and to improve resources use efficiency is crucial to ensure food security while preserving soil quality

microbial biodiversity and providing business opportunities for farmers Biostimulants based on microorganisms or organic substances obtained from renewable materials represent a sustainable efficient technology or complement to synthetic counterparts to improve nutrient use efficiency and secure crop yield stability Under the new European Union Regulation 2019 1009 plant biostimulants were defined based on four agricultural functional claims as follows Plant biostimulants are products that stimulate plant nutrition processes independently of the product s nutrient content with the sole aim of improving one or more of the following characteristics of the plant and or the plant rhizosphere 1 nutrient use efficiency 2 tolerance resistance to a biotic stress 3 quality characteristics or 4 availability of confined nutrients in the soil or rhizosphere Many diverse natural substances and chemical derivatives of natural or synthetic compounds as well as beneficial microorganisms are cataloged as plant biostimulants including i humic substances ii plant or animal based protein hydrolysates iii macro and micro algal extracts iv silicon v arbuscular mycorrhizal fungi AMF and vi plant growth promoting rhizobacteria PGPR belonging to the Azotobacter Azospirillum and Rhizobium genera

Recent Advances in Symbiosis Research: Integrative Approaches M. Pilar Francino,Mónica Medina,2017-02-02 Traditionally symbiosis research has been undertaken by researchers working independently of one another and often focused on a few cases of bipartite host symbiont interactions New model systems are emerging that will enable us to fill fundamental gaps in symbiosis research and theory focusing on a broad range of symbiotic interactions and including a variety of multicellular hosts and their complex microbial communities In this Research Topic we invited researchers to contribute their work on diverse symbiotic networks since there are a large variety of symbioses with major roles in the proper functioning of terrestrial or aquatic ecosystems and we wished the Topic to provide a venue for communicating findings across diverse taxonomic groups A synthesis of recent investigations in symbiosis can impact areas such as agriculture where a basic understanding of plant microbe symbiosis will provide foundational information on the increasingly important issue of nitrogen fixation climate change where anthropogenic factors are threatening the survival of marine symbiotic ecosystems such as coral reefs animal and human health where unbalances in host microbiomes are being increasingly associated with a wide range of diseases and biotechnology where process optimization can be achieved through optimization of symbiotic partnerships Overall our vision was to produce a volume of works that will help define general principles of symbiosis within a new conceptual framework in the road to finally establish symbiology as an overdue central discipline of biological science

Understanding Light Microscopy Jeremy Sanderson,2019-05-06 Introduces readers to the enlightening world of the modern light microscope There have been rapid advances in science and technology over the last decade and the light microscope together with the information that it gives about the image has changed too Yet the fundamental principles of setting up and using a microscope rests upon unchanging physical principles that have been understood for years This informative practical full colour guide fills the gap between specialised edited texts on detailed research topics and introductory books which

concentrate on an optical approach to the light microscope It also provides comprehensive coverage of confocal microscopy which has revolutionised light microscopy over the last few decades Written to help the reader understand set up and use the often very expensive and complex modern research light microscope properly Understanding Light Microscopy keeps mathematical formulae to a minimum containing and explaining them within boxes in the text Chapters provide in depth coverage of basic microscope optics and design ergonomics illumination diffraction and image formation reflected light polarised light and fluorescence microscopy deconvolution TIRF microscopy FRAP super resolution techniques biological and materials specimen preparation and more Gives a didactic introduction to the light microscope Encourages readers to use advanced fluorescence and confocal microscopes within a research institute or core microscopy facility Features full colour illustrations and workable practical protocols Understanding Light Microscopy is intended for any scientist who wishes to understand and use a modern light microscope It is also ideal as supporting material for a formal taught course or for individual students to learn the key aspects of light microscopy through their own study Wildlife Tourism, Environmental Learning and Ethical Encounters Ismar Borges de Lima, Ronda J. Green, 2017-06-13 This book outlines the status quo of worldwide wildlife tourism and its impacts on planning management knowledge awareness behaviour and attitudes related to wildlife encounters It sets out to fill the considerable gaps in our knowledge on wildlife tourism applied ecology and environmental education providing comprehensive information on and an interdisciplinary approach to effective management in wildlife tourism Examining the intricacies challenges and lessons learned in a meaningful and rewarding tourism niche this interdisciplinary book comprehensively examines the major potentials and controversies in the wildlife tourism industry Pursuing an insightful provocative and hands on approach it primarily addresses two questions Can we reconcile the needs of the wildlife tourism industry biodiversity conservation ecological learning and animal ethics issues and What is the Future of the Wildlife Tourism Industry Though primarily intended as a research text it also offers a valuable resource for a broad readership which includes university and training students researchers scholars tourism practitioners and professionals planners and managers as well as the staff of government agencies *Non-conventional Yeast in the Wine Industry* Albert Mas, Jose Manuel Guillaón, Gemma Beltran, 2017-01-11 **Impact of Lipid Peroxidation on the Physiology and Pathophysiology of Cell Membranes** Angel Catalá, Mario Díaz, 2017-01-17 The general process of lipid peroxidation consists of three stages initiation propagation and termination The initiation phase of lipid peroxidation includes hydrogen atom abstraction Several species can abstract the first hydrogen atom and include the radicals hydroxyl alkoxyl peroxy and possibly HO₂ The membrane lipids mainly phospholipids containing polyunsaturated fatty acids are predominantly susceptible to peroxidation because abstraction from a methylene group of a hydrogen atom which contains only one electron leaves at the back an unpaired electron on the carbon The initial reaction of OH with polyunsaturated fatty acids produces a lipid radical L which in turn reacts with molecular oxygen to form a lipid hydroperoxide LOOH Further the LOOH formed can

suffer reductive cleavage by reduced metals such as Fe producing lipid alkoxyl radical LO Peroxidation of lipids can disturb the assembly of the membrane causing changes in fluidity and permeability alterations of ion transport and inhibition of metabolic processes In addition LOOH can break down frequently in the presence of reduced metals or ascorbate to reactive aldehyde products including malondialdehyde MDA 4 hydroxy 2 nonenal HNE 4 hydroxy 2 hexenal 4 HHE and acrolein Lipid peroxidation is one of the major outcomes of free radical mediated injury to tissue mainly because it can greatly alter the physicochemical properties of membrane lipid bilayers resulting in severe cellular dysfunction In addition a variety of lipid by products are produced as a consequence of lipid peroxidation some of which can exert beneficial biological effects under normal physiological conditions Intensive research performed over the last decades have also revealed that by products of lipid peroxidation are also involved in cellular signalling and transduction pathways under physiological conditions and regulate a variety of cellular functions including normal aging In the present collection of articles both aspects adverse and beneficial of lipid peroxidation are illustrated in different biological paradigms We expect this eBook may encourage readers to expand the current knowledge on the complexity of physiological and pathophysiological roles of lipid peroxidation

Application of Liquid Biofuels to Internal Combustion Engines Soo-Young No, 2020-02-17 This book provides a comprehensive overview of the application of liquid biofuels to internal combustion IC engines Biofuels are one of the most promising renewable and sustainable energy sources Particularly liquid biofuels obtained from biomass could become a valid alternative to the use of fossil fuels in the light of increasingly stringent environmental constraints In this book the discussion is limited to liquid biofuels obtained from triglycerides and lignocellulose among the many different kinds of biomass Several liquid biofuels from triglycerides straight vegetable oil biodiesel produced from inedible vegetable oil hydrotreated vegetable oil and pyrolytic oil have been selected for discussion as well as biofuels from lignocellulose bio oil alcohols such as methanol ethanol and butanol and biomass to liquids diesel This book includes three chapters on the application of methanol ethanol and butanol to advanced compression ignition CI engines such as LTC HCCI RCCI and DF modes Further the application of other higher alcohols and other drop in fuels such as DMF MF MTHF and GVL are also discussed The book will be a valuable resource for graduate students researchers and engine designers who are interested in the application of alcohols and other biofuels in advanced CI engines and also useful for alternative energy planners selecting biofuels for CI engines in the future
