Borgerding,2018-06-21

This edited book provides a global view on evolution education. It describes the state of evolution education in different countries that are representative of geographical regions around the globe such as Eastern Europe, Western Europe, North Africa, South Africa, North America, South America, Middle East, Far East, South East Asia, Australia, and New Zealand. Studies in evolution education literature can be divided into three main categories: a) understanding the interrelationships among cognitive, affective, epistemological, and religious factors that are related to people's views about evolution; b) designing, implementing, evaluating evolution education curriculum that reflects contemporary evolution understanding; and c) reducing antievolutionary attitudes. This volume systematically summarizes the evolution education literature across these three categories for each country or geographical region. The individual chapters thus include common elements that facilitate a cross-cultural meta-analysis. Written for a primarily academic audience, this book provides a much-needed common background for future evolution education research across the globe.

*Finding Firmer Ground: The Role of Higher Education in U.S.-China Relations* Yawei Liu/Michael Cerny, 2022-04-27

The U.S.-China educational exchange began auspiciously after a 30-year hiatus in 1978 when Chinese leader Deng Xiaoping announced his strategic decision to send 5,000 students and scholars from China each year to further their education. Then U.S. President Jimmy Carter famously responded, "Tell him to send 100,000." This was the launch of educational exchange as a core pillar of the U.S.-China relationship. Until the 40th anniversary of the normalization of U.S.-China relations and U.S.-China educational exchange in 2019, there was general agreement that the exchange of students and scholars benefited both countries. There was recognition that the enormous increase in personal interaction and friendships and knowledge about each other's society, culture, economy, and government strengthened understanding, trust, and cooperation. At a time when U.S.-China relations are at its lowest point since the normalization of relations, the benefits of educational exchange are being questioned, if not under assault. Few could have predicted that Chinese students would be weaponized by both sides caught up in the political and security disputes between the two governments. A trade war, political tensions, concerns about academic espionage and influence operations, rising incidents of anti-Asian hate, and a global pandemic have created a perfect storm to stir up distrust, as well as retaliatory measures that restrict student mobility on both sides of the Pacific. After years of fast growth, the number of Chinese students and researchers coming to the U.S. has slowed. China is still the largest source of international students in the U.S., accounting for about one-third of the total, but America's appeal is weakening. Is this shift toward declining numbers an overdue correction to better protect America against academic espionage and influence operations and prevent China from capitalizing on American know-how to accelerate its own progress? Or is this decline in numbers an unnecessary and damaging hit on American universities' preeminent position in global higher education and its open science model, leading to loss of U.S. competitiveness and international prestige? This report more broadly is an attempt to discern the benefits, risks, and challenges of U.S.-China educational exchange and determine how educational exchange can advance the

interests of both the U S and China going forward      *Creating Effective Teaching and Learning Spaces: Shaping Futures and Envisioning Unity in Diversity and Transformation* Zilungile Lungi Sosibo,Eunice Ivala,2021-09-07 Higher education in post apartheid South Africa was always likely to attract academic interest and yet there remains a dearth of research on creating teaching and learning spaces suitable for students from diverse backgrounds Using examples from higher education institutions across the Southern African Developing Community SADC region this volume explores the ways teaching and learning spaces are being used to advance the transformation agenda of higher education in these regions and provides concrete recommendations for the future The book is sure to appeal to academics from a variety of disciplines from African African American and ethnic studies to education and sociology It will be of particular interest to teacher trainers administrators and policy makers working in higher education and anyone else with a stake in managing cultural diversity in education      Lessons from Estonia's Education Success Story Peeter Mehisto,Maie Kitsing,2022-07-19 This book explores how Estonia despite high levels of poverty has transformed its education system to become Europe s top performer on PISA Programme for International Student Assessment The engaging narrative uncovers reforms mistakes and lessons learnt that have been harnessed to create a high performing high equity education system which includes social and education policies fostering equity inclusion learner autonomy as well as schoolteacher and principal professionalism autonomy and responsibility It unearths how easy access to a wide range of data such as perceptions of well being autonomy and connectedness in addition to examination results builds internal and external accountability and contributes to collective stakeholder efficacy Grounded in research from Estonia and beyond this is an ideal read for educators administrators academics university students change agents and parents interested in school system improvement As equity equality and inclusion are core drivers of the Estonian education system this book would also be of interest to those working in social justice inclusion and diversity      *10 in One Study Package for CBSE Science Class 10 with Objective Questions & 3 Sample Papers 4th Edition* Disha Experts,2020-08-08      NK Cell Subsets in Health and Disease: New Developments Emanuela Marcenaro,Luigi D. Quantum Structures in Cognitive and Social Science Diederik Aerts, Jan Broekaert, Liane Gabora, Sandro Sozzo, 2016-06-26 Traditional approaches to cognitive psychology correspond with a classical view of logic and probability theory More specifically one typically assumes that cognitive processes of human thought are founded on the Boolean structures of classical logic while the probabilistic aspects of these processes are based on the Kolmogorovian structures of classical probability theory However growing experimental evidence indicates that the models founded on classical structures systematically fail when human decisions are at stake These experimental deviations from classical behavior have been called paradoxes fallacies effects or contradictions depending on the specific situation where they appear But they involve a broad spectrum of cognitive and social science domains ranging from conceptual combination to decision making under uncertainty behavioral economics and linguistics This situation has constituted a serious drawback to the development of various disciplines like cognitive science linguistics artificial intelligence economic modeling and behavioral finance A different approach to cognitive psychology initiated two decades ago has meanwhile matured into a new domain of research called quantum cognition Its main feature is the use of the mathematical formalism of quantum theory as modeling tool for these cognitive situations where traditional classically based approaches fail Quantum cognition has recently attracted the interest of important journals and editing houses academic and funding institutions popular science and media Specifically within a quantum cognition approach one assumes that human decisions do not necessarily obey the rules of Boolean logic and Kolmogorovian probability and can on the contrary be modeled by the quantum mechanical formalism Different concrete quantum theoretic models have meanwhile been developed that successfully represent the cognitive situations that are classically problematical by explaining observed deviations from classicality in terms of genuine quantum effects such as contextuality emergence interference superposition entanglement and indistinguishability In addition the validity of these quantum models is convincingly confirmed by new experimental tests We also stress that since the use of a quantum theoretic framework is mainly for modeling purposes the identification of quantum structures in cognitive processes does not presuppose without being incompatible with it the existence of

microscopic quantum processes in the human brain In this Research Topic we review the major achievements that have been obtained in quantum cognition by providing an accurate picture of the state of the art of this emerging discipline Our overview does not pretend to be either complete or exhaustive But we aim to introduce psychologists and social scientists to this challenging new research area encouraging them at the same time to consider its promising results It is our opinion that if continuous progress in this domain can be realized quantum cognition can constitute an important breakthrough in cognitive psychology and potentially open the way towards a new scientific paradigm in social science
