The Routledge Handbook of Property, Law and Society Nicole Graham, Margaret Davies, Lee Godden, 2022-11-14 This handbook brings together diverse perspectives major topics and multiple approaches to one of the biggest legal institutions in society property Property touches on many fundamental human questions It involves decisions about power economy morality work and ecology It also involves ideas about where humans fit in the world and how humans relate to more than human life This book will ask in myriad ways such questions as what property means what kinds of property there are what is and should be the relationship between owned and owner and what is the impact of different forms of property on life in this world Drawing on a range of socio legal and empirical methodologies renowned

scholars and rising stars in property from around the world present current issues and map future directions in research. Coming from the place of law but reaching out through cognate disciplines this handbook provides a comprehensive and accessible survey of current research at the interface of property, society and the environment. This handbook will appeal to students and researchers across a range of disciplines including law, sociology, geography, history and economics.

Property Rights in Outer Space Matthew Johnson, 2024-05-28. This book explores the role of private mining rights in the utopian imaginary of space colonisation. It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off-world frontier. Written in an engaging style, the book investigates a novel case study in the history of capitalism and the commons: the emergence of a nascent space mining industry undergirded by a contentious legislative framework. In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources. This unilateral act of pre-emptive law making would appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation. Using this central dynamic between privately held mining rights and outer space as a global commons, Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity. The anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the terrain of political history, such as the tensions between states and markets, public law and private power, the commons and exclusive property. The emerging cosmopolitics of off-world private property mirrors and is often explicitly embedded within neoliberal geopolitics, prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space. This book is compelling reading for anyone interested in the social study of space, law, economics, technology, politics and property rights.

Tunnel Visions Michael Riordan, Lilian Hoddeson, Arienne W. Kolb, 2015-11-20. A detailed and engaging account of the development of the superconducting supercollider, one of the largest scientific undertakings in the United States. Journal of American History. Starting in the 1950s US physicists dominated the search for elementary particles, aided by the association of this research with national security; they held this position for decades. In an effort to maintain their hegemony and track down the elusive Higgs boson, they convinced President Reagan and Congress to support construction of the multibillion-dollar Superconducting Super Collider project in Texas, the largest basic science project ever attempted. But after the Cold War ended and the estimated SSC cost surpassed ten billion dollars, Congress terminated the project in October 1993. Drawing on extensive archival research, contemporaneous press accounts and over one hundred interviews with scientists, engineers, government officials and others involved, *Tunnel Visions* tells the riveting story of the aborted SSC project. The authors examine the complex interrelated causes for its demise, including problems of large project

management continuing cost overruns and lack of foreign contributions In doing so they ask whether Big Science has become too large and expensive including whether academic scientists and their government overseers can effectively manage such an enormous undertaking Focusing on the scientific technical and political conflicts that led to delays ever rising costs and eventually the SSC s cancelation by Congress Tunnel Visions is a true techno thriller Burton Richter winner of the Nobel Prize in Physics Most good science stories are tales of discovery and success but failure can be just as riveting Here two historians and an archivist describe the greatest particle physics experiment that never was Scientific American

Environmental Change in the Lake Tahoe Basin Robert N. Coats,Sudeep Chandra,Alan Heyvaert,Charles R. Goldman,S. Geoffrey Schladow,2025-11-18 The Lake Tahoe Basin is both a natural treasure and a complex case study in environmental management Environmental Change in the Lake Tahoe Basin offers a comprehensive assessment of the region s environmental history current conditions and future challenges providing lessons in how science based policies can drive effective stewardship in high value high conflict landscapes For over a century scientific research and management efforts have aimed to mitigate the impacts of logging mining pollution and invasive species while balancing urban development tourism and ecological preservation on the Lake The book explores these challenges through a multidisciplinary lens integrating environmental science policy analysis and case studies of both successful and failed management strategies Written by experts who have played direct roles in key scientific discoveries and policy decisions the book also examines the influence of environmental organizations and litigation in shaping conservation efforts At its core the authors argue that the Tahoe Basin serves as a model for science driven land and water stewardship The book evaluates long term monitoring programs offering actionable recommendations for improving environmental oversight and resource management Combining scientific analysis with accessible language Environmental Change in the Lake Tahoe Basin serves as an up to date review of the region s environmental challenges providing an essential guide for scientists resource managers and policymakers The authors will donate all royalties from the sale of this volume to the Union of Concerned Scientist www.ucs.org **University in the 21st Century** Lisa-Marie Geberth,Lisa-Teresa Woller,2023-04-01 University has changed dramatically over the last decades From the spirit of Humboldt that science in itself is the greatest motivator to study and do research we experience a shift towards neoliberalism Studying became part of something one needs to do to compete on a competitive job market Research gets more and more influenced by interests of those financing research funds Digitalization changed the way people interact in a university setting This book shows different views regarding university from being a student becoming an alumnus and then maybe a teacher challenging views on grading and exams to problematic patriarchal structures and problems with creating a new study program Students alumni researcher and lecturers were invited to join this volume and give unique insights into post university life *The Oxford Handbook of the Science of Science Communication* Kathleen Hall Jamieson,Dan M. Kahan,Dietram Scheufele,2017 On topics from genetic engineering and mad cow disease to vaccination

and climate change this Handbook draws on the insights of 57 leading science of science communication scholars who explore what social scientists know about how citizens come to understand and act on what is known by science

CryptoSchool Joachim von zur Gathen, 2015-11-20 This book offers an introduction to cryptology the science that makes secure communications possible and addresses its two complementary aspects cryptography the art of making secure building blocks and cryptanalysis the art of breaking them The text describes some of the most important systems in detail including AES RSA group based and lattice based cryptography signatures hash functions random generation and more providing detailed underpinnings for most of them With regard to cryptanalysis it presents a number of basic tools such as the differential and linear methods and lattice attacks This text based on lecture notes from the author's many courses on the art of cryptography consists of two interlinked parts The first modern part explains some of the basic systems used today and some attacks on them However a text on cryptology would not be complete without describing its rich and fascinating history As such the colorfully illustrated historical part interspersed throughout the text highlights selected inventions and episodes providing a glimpse into the past of cryptology The first sections of this book can be used as a textbook for an introductory course to computer science or mathematics students Other sections are suitable for advanced undergraduate or graduate courses Many exercises are included The emphasis is on providing reasonably complete explanation of the background for some selected systems
