Lesson Objectives

-  Explain what a “protist” is.
-  Describe how protists are related to other eukaryotes.

Lesson Summary

The First Eukaryotes Protists are eukaryotes that are not members of the plant, animal, or fungi kingdoms. The first eukaryotes were protists.

- ▶ Most protists are unicellular.
- ▶ Protists are a very diverse group of species.
- ▶ Many species of protists are more closely related to plants, fungi, or animals than they are to other protists. Because of this, some scientists think the members of the kingdom Protista should be reclassified.

5. Genetic analyses of protists indicate that they belong in six different _____.

Robert Harding Whittaker

211 Protist Classification Worksheet Answers:

The Software Encyclopedia, 1986 Protist Classification and the Kingdoms of Organisms Robert Harding
Whittaker, 1978 Traditional classification imposed a division into plant like and animal like forms on the unicellular eukaryotes or protists in a current view the protists are a diverse assemblage of plant animal and fungus like groups Classification of these into phyla is difficult because of their relatively simple structure and limited geological record but study of ultrastructure and other characteristics is providing new insight on protist classification Possible classifications are discussed and a summary classification of the living world into kingdoms Monera Protista Fungi Animalia Plantae and phyla is suggested This classification also suggests groupings of phyla into superphyla and form superphyla and a broadened kingdom Protista including green algae oomycetes and slime molds but excluding red and brown algae The classification thus seeks to offer a compromise between the protist and protocist kingdoms of Whittaker and Margulis and to combine a full listing of phyla with grouping of these for synoptic treatment
