Alessandra Francini, Luca Sebastiani

Anna Common Paper For Life Science:

Selected Papers from the 3rd International Symposium on Life Science Valentin A. Stonik, 2020-12-10 This book contains information for specialists in various fields of science From the point of view of pharmacology data are reported regarding the effect of echinochrome A and related metabolites from sea urchins on the survival and functional properties of stem cells which can facilitate ex vivo application of this compound in medicine For scientists who isolate and establish structures of marine natural compounds an article devoted to the proof of the microbial origin of a typical metabolite earlier found exclusively from marine invertebrates 6 epi monancherin may also be of interest A range of new marine metabolites was discovered from the both marine invertebrates and marine microorganisms particularly in marine isolates of fungi Some marine natural products could be applied to treat such diseases as Parkinson's disease ischemic stroke viral infections and so on Magnificamide a new peptide from sea anemones inhibits porcine and human saliva amylases showing its probable antidiabetic properties Application of the genomic approach was discussed in studies on various marine bacteria producing marine enzymes with unusual specificity The lectins capable of recognizing glycoforms of different substrates demonstrate the possibility to be used to elaborate new medical diagnostics

The Life, Science and Times of Lev Vasilevich Shubnikov L. J. Reinders, 2018-02-27 This book describes the life times and science of the Soviet physicist Lev Vasilevich Shubnikov 1901-1937 From 1926 to 1930 Shubnikov worked in Leiden where he was the co-discoverer of the Shubnikov-De Haas effect After his return to the Soviet Union he founded in Kharkov in Ukraine the first low temperature laboratory in the Soviet Union which in a very short time became the foremost physics institute in the country and among other things led to the discovery of type II superconductivity In August 1937 Shubnikov together with many of his colleagues was arrested and shot early in November 1937 This gripping story gives deep insights into the pioneering work of Soviet physicists before the Second World War as well as providing much previously unpublished information about their brutal treatment at the hands of the Stalinist regime

The Selected Papers of Jane Addams Mary Lynn Bryan, Barbara Bair, Maree de Angury, Jane Addams, 2010-10-01 Venturing into Usefulness the second volume of The Selected Papers of Jane Addams documents the experience of this major American historical figure intellectual social activist and author between June 1881 when at twenty one she had just graduated from Rockford Female Seminary and early 1889 when she was on the verge of founding the Hull House settlement with Ellen Gates Starr During these years she evolved from a high minded but inexperienced graduate of a women's seminary into an educated woman and seasoned traveler well exposed to elite culture and circles of philanthropy Themes inaugurated in the previous volume are expanded here including dilemmas of family

relations and gender roles the history of education the dynamics of female friendship religious belief and ethical development changes in opportunities for women and the evolution of philanthropy social welfare and reform ideas **Papers on Indian Reform** ,1889 **Abiotic Stress Effects on Performance of Horticultural Crops** Alessandra Francini, Luca

Sebastiani, 2019-11-05 This book is a printed edition of the Special Issue Abiotic Stress Effects on Performance of Horticultural Crops that was published in Horticulturae *Protein Phosphorylation in Health and Disease* Allegra Via, Andreas Zanzoni, 2016-08-11 Protein phosphorylation is one of the most abundant reversible post translational modifications in eukaryotes It is involved in virtually all cellular processes by regulating protein function localization and stability and by mediating protein protein interactions Furthermore aberrant protein phosphorylation is implicated in the onset and progression of human diseases such as cancer and neurodegenerative disorders In the last years tens of thousands of in vivo phosphorylation events have been identified by large scale quantitative phospho proteomics experiment suggesting that a large fraction of the proteome might be regulated by phosphorylation This data explosion is increasingly enabling the development of computational approaches often combined with experimental validation aiming at prioritizing phosphosites and assessing their functional relevance Some computational approaches also address the inference of specificity determinants of protein kinases phosphatases and the identification of phosphoresidue recognition domains In this context several challenging issues are still open regarding phosphorylation including a better understanding of the interplay between phosphorylation and allosteric regulation agents and mechanisms disrupting or promoting abnormal phosphorylation in diseases the identification and modulation of novel phosphorylation inhibitors and so forth Furthermore the determinants of kinase and phosphatase recognition and binding specificity are still unknown in several cases as well as the impact of disease mutations on phosphorylation mediated signaling The articles included in this Research Topic illustrate the very diverse aspects of phosphorylation ranging from structural changes induced by phosphorylation to the peculiarities of phosphosite evolution Some also provide a glimpse into the huge complexity of phosphorylation networks and pathways in health and disease and underscore that a deeper knowledge of such processes is essential to identify disease biomarkers on one hand and design more effective therapeutic strategies on the other **Molecular Biomarkers In Cardiology** Pietro

Scicchitano, 2021-04-28 ear Colleagues The approach to diseases is facing novel frontiers targeting gene and improving person centered medicine able to easily and specifically detect early stages of pathologies The present book includes the most futuristic approaches to the identification of cardiac diseases by means of the most recent discoveries in molecular and genetic diagnosis The articles will give you the opportunity to think of cardiac diseases as adverse conditions which can be more easily detected by means of technologies and the research spirit of us physicians dedicated to humans care Please enjoy this reading [Anna Atkins](#) Corey Keller, 2025-10-21 Learn about the life of Anna Atkins the pioneering photographer who combined art and science to create the first photographically illustrated book Step into the world of Anna Atkins 1799

1871 perhaps the world's first female photographer and a pioneer of the medium. She lived an existence full of heartache and triumph from her mother's death when Atkins was an infant to her publication of multiple photographic books as an adult. After the passing of her mother, Atkins was raised primarily by her father and grandfather who placed an emphasis on both her emotional and intellectual growth. As a result, she spent her life surrounded by some of the brightest minds of Victorian England during the Industrial Revolution. Despite societal gender norms of the time which typically limited women to a life within the home, Atkins gained the respect of the scientific community with her ambitious multivolume album *Photographs of British Algae: Cyanotype Impressions*, now recognized as the world's first photographically illustrated book. Her cyanotypes, in addition to their scientific accuracy, lent artistic beauty to her publications, setting the stage for new uses of this experimental technology. In an era replete with state-of-the-art inventions and innovative ideas, Atkins pushed photography forward in its earliest days with courage, creativity, and brilliance.

Contemporary Perspectives in Philosophy and Methodology of Science Wenceslao J. González, 2006. Nowadays, philosophy and methodology of science appear as a combination of novelty and continuity. This blend is clear both in the general approaches to science, those thought of as any science, and in the specific perspectives on every science, either formal or empirical. There are new topics for philosophical reflection, such as key issues in philosophy of medicine and central problems raised by neuroscience. Thus, new contents have brought attention to aspects that previously went almost unnoticed. In addition, there are new angles for philosophical study, such as the repercussion of society on scientific activity, in aims, processes, and results. But the background of the main philosophical and methodological trends of the twentieth century is in many ways still in place.
