Cooper, 2013-12-11 This volume represents the proceedings of a NATO Advanced Studies Institute held near Barga Italy July 11-23 1988 involving over 90 participants from more than twelve countries of Europe North America and elsewhere It was not our intention at this meeting to present a complete up to the minute review of current research in enzyme catalysis but rather in accord with the intended spirit of NATO ASI to give an opportunity for advanced students and researchers in a wide variety of disciplines to meet together and study the problem from different points of view Hence the lectures cover topics ranging from the purely theoretical aspects of chemical reaction kinetics in condensed matter through practical experimental approaches to enzyme structure dynamics and mechanism including the new experimental opportunities arising from genetic engineering techniques Our approach was unashamedly physical both because the more biochemical aspects of enzymology are amply covered elsewhere and because progress in our understanding and application of the molecular basis of enzymic processes must ultimately come from advances in physical knowledge We tried to cover as wide a spectrum as possible and succeeded in gathering an expert and enthusiastic team of speakers but there are some inevitable omissions In particular and with hindsight our discussions might have been enriched by more detailed coverage of general aspects of chemical catalysis but readers requiring this background should find adequate references herein
