Constructing European Intellectual Property Christophe Geiger,2013 It is no longer possible to practice teach or study purely domestic intellectual property law within Europe European intellectual property norms now structure protection throughout the continent and even beyond Paradoxically what might seem as a simplification of legal rules has created a maze of new complexities substantive institutional and methodological This collection by some of the leading scholars in European IP manages to capture that complexity without sacrificing clarity Canvassing the entire field with a rich array of contributions the book both highlights the roots of European IP law and asks important fundamental questions about where it is going One can only hope that it is read by anyone with a hand in the future development of European IP law Graeme B Dinwoodie University of Oxford UK Christophe Geiger has put together a very fine collection of essays by many of the very best scholars in European intellectual property law The essays explore the basis extent as well as the successes and failings of regional harmonization of trade marks geographical indications copyright designs patents and remedies The celebrated cast of authors naturally discuss in addition to the various directives and regulations on each topic the Treaty provisions on exhaustion of rights and competition and their interpretation relevant provisions on legislative competence Article 17 2 of the Charter other fundamental rights and the growing case law of the Court of Justice There is essential material here for anyone interested in European intellectual property law as well as ideas for the improvement and further development of European IP law Lionel Bently University of Cambridge UK Constructing European Intellectual Property offers a comprehensive assessment of the current state of intellectual property legislation in Europe and gives direction on how an improved system might be achieved This detailed study presents various perspectives on what further

actions are necessary to provide the circumstances and tools for the construction of a truly balanced European intellectual property system. The book takes as its starting point that the ultimate aim of such a system should be to ensure sustainable and innovation based economic growth while enhancing free circulation of ideas and cultural expressions. Being the first in the European Intellectual Property Institutes Network EIPIN series, this book lays down some concrete foundations for a deeper understanding of European intellectual property law and its complex interplay with other fields of jurisprudence as well as its impact on a broad array of spheres of social interaction. In so doing, it provides a well needed platform for further research. Academics, policymakers, lawyers and many others concerned with establishment of a regulatory framework for intangibles in the EU will benefit from the extensive and thoughtful discussion presented in this work.

Research Handbook on Human Rights and Intellectual Property Christophe Geiger, 2015-02-27. *Research Handbook on Human Rights and Intellectual Property* is a comprehensive reference work on the intersection of human rights and intellectual property law. Resulting from a field specific expertise of over 40 scholars and professionals of world re Parliamentary Debates (Hansard). Great Britain. Parliament. House of Commons, 2010. Antimicrobial Resistance in the Environment Patricia L. Keen, Mark H. M. M. Montforts, 2012-01-24. Examines effects of the environmental distribution of antimicrobial resistance genes on human health and the ecosystem. Resistance genes are everywhere in nature in pathogens, commensals and environmental microorganisms. This contributed work shows how the environment plays a pivotal role in the development of antimicrobial resistance traits in bacteria and the distribution of resistant microbial species, resistant genetic material and antibiotic compounds. Readers will discover the impact of the distribution in the environment of antimicrobial resistance genes and antibiotics on both the ecosystem and human and animal health. *Antimicrobial Resistance in the Environment* is divided into four parts: Part I Sources including ecological and clinical consequences of antibiotic resistance by environmental microbes; Part II Fate including strategies to assess and minimize the biological risk of antibiotic resistance in the environment; Part III Antimicrobial Substances and Resistance including antibiotics in the aquatic environment; Part IV Effects and Risks including the effect of antimicrobials used for non human purposes on human health. Recognizing the intricate links among overlapping complex systems, this book examines antimicrobial resistance using a comprehensive ecosystem approach. Moreover, the book's multidisciplinary framework applies principles of microbiology, environmental toxicology and chemistry to assess the human and ecological risks associated with exposure to antibiotics or antibiotic resistance genes that are environmental contaminants. Each chapter has been written by one or more leading researchers in such fields as microbiology, environmental science, ecology and toxicology. Comprehensive reference lists at the end of all chapters serve as a gateway to the primary research in the field. Presenting and analyzing the latest findings in a field of growing importance to human and environmental health, this text offers readers new insights into the role of the environment in antimicrobial resistance development, the dissemination of antimicrobial resistant genetic elements and the transport of

antibiotic resistance genes and antibiotics
