

Smart Electronic Transmitters Type BCN

A0580

FIGURE 1 - Type BCN Smart Electronic Pressure Transmitter and Type STT02 Smart Transmitter Terminal

Features

- **Direct Replacement of Existing Two-Wire Transmitters.** The BCN transmitter (point-to-point mode) can replace most 4 to 20 mA output pressure transmitters that currently operate over a conventional two-wire system.
- **Enhanced Remote Communication.** Communication with the BCN transmitter is possible using the Type STT02 Smart Transmitter Terminal. The communication method uses a high frequency alternating current (ac). This technique has been designed to function in the high noise environments found in many plants. The STT02 terminal can be used anywhere the signal lines can be accessed and can be located up to 1 mile (1.6 Km) from the target device, providing maximum remote user flexibility.
- **Simultaneous Digital Communications and Process Variable.** Communication information is modulated and does not effect the 4 to 20 mA process variable signal.

Notation Jonathan P. Bowen, Andreas Fett, Michael G. Hinchey, 2011-04-06 1 In a number of recent presentations most notably
at FME 96 one of the foremost scientists in the field of formal methods C A R Hoare has highlighted the fact that formal
methods are not the only technique for producing reliable software This seems to have caused some controversy not least
amongst formal methods practitioners How can one of the founding fathers of formal methods seemingly denounce the field of
research after over a quarter of a century of support This is a question that has been posed recently by some formal methods
skeptics However Prof Hoare has not abandoned formal methods He is reiterating 2 albeit more radically his 1987 view
that more than one tool and notation will be required in the practical industrial development of large scale complex computer systems
and not all of these tools and notations will be or even need be formal in nature Formal methods are not a solution
but rather one of a selection of techniques that have proven to be useful in the development of reliable complex systems and to
result in hardware and software systems that can be produced on time and within a budget while satisfying the stated
requirements After almost three decades the time has come to view formal methods in the context of overall industrial scale
system development and their relationship to other techniques and methods We should no longer consider the issue of whether we
are pro formal or anti formal but rather the degree of formality if any that we need to support in system development This is
