Foundations of Education: Instructional strategies for teaching children and youths with visual impairments

M. Cay Holbrook, Alan J. Koenig, 2000 **Shaping Early Childhood: Learners, Curriculum and Contexts** Glenda Mac Naughton, 2003-12-16 This should be essential reading for anyone involved in the training and professional development of early years practitioners. It is an impressive analysis of the historical and contemporary big ideas that have influenced societies and practitioners' views of children and the nature of the curriculum. There are powerful sections on parents and communities. I particularly liked the stimulating ideas galleries with their statements from researchers, policy makers and practitioners around the world. *Nursery World* October 2004. This key textbook introduces students and practitioners to a wide range of different approaches to early childhood. It provides practical strategies for developing and implementing early learning experiences that promote excellence and equity for children. The book presents the latest research and thinking about good practice, discusses how various philosophies and beliefs influence decisions in early childhood education and identifies the key thinkers behind each approach. By examining different perspectives, the book helps early childhood practitioners to navigate their way through competing views, make informed choices and be critically reflective in their work. In an accessible, lively and user-friendly way, it explores issues such as: What constitutes an appropriate early childhood curriculum? How best to study and assess children? Involving parents and children in early childhood learning. The book features a range of pedagogical devices to inspire early childhood workers to reflect critically on their work and the ideas underpinning it, including: Boxed definitions of key terms; Ideas summary charts and ideas galleries; Clarification exercises; Case studies; Further reading lists. Early Childhood Education Petr G. Grotewell, Yanus R. Burton, 2008 This book focuses on early childhood education which spans the human life from birth to age 8 Infants and toddlers experience life more holistically than any other age group Social emotional cognitive language and physical lessons are not learned separately by very young children Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience not just that part of the experience to which the adult gives attention Although early childhood education does not have to occur in the absence of the parent or primary caregiver this term is sometimes used to denote education by someone other than these the parent or primary caregiver Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent Other terms that is often used interchangeably with early childhood education are early childhood learning early care and early education Much of the first two years of life are spent in the creation of a child's first sense of self or the building of a first identity Because this is a crucial part of children's makeup how they first see themselves how they think they should function how they expect others to function in relation to them early care must ensure that in addition to carefully selected and trained caregivers links with family home culture and home language are a central part of program policy If care becomes a substitute for rather than a support of family children may develop a less than positive sense of who they are and where they come from because of their child care experience
