Animal Common Field Guide Highway Roads Street:

American Roadkill Don H. Corrigan, 2021-11-03 Slaughtered along our highways roadkill may be observed regularly but aren't likely to be given much thought. Research scientists, animal rights activists, roadkill artists, writers, ethicists, and lyricists however are increasingly sounding the alarm. They report that we are killing the very animals we love and are driving many of them to the brink of extinction. Detailing the death and destruction of mammals, reptiles, amphibians, and insect pollinators, this study examines the ways in which we are thus jeopardizing our own futures. Beginning in the Model T era, biologists counted the common carnage of the time: cottontails, woodchucks, and squirrels mostly. That record keeping continues today. Beyond the bleak statistics, zoologists are rerouting migratory paths of animals and are advocating for cat and dog companions. This book illuminates both our successes and failures in keeping animals out of harm's way and what those efforts reflect about ourselves and our capacity to care enough to alter the road ahead. *The Ecology of Transportation:*

Managing Mobility for the Environment John Davenport, Julia L. Davenport, 2006-06-30 Human transport by land, sea, and air has increased exponentially through time in intensity, paralleling rises in population, prosperity, and rates of technological change. Transport has considerable ecological effects, many of them detrimental to environmental sustainability. This volume brings together international experts from a variety of disciplines to review the ecological effects and their causes in terms of road, rail, ship, and aircraft transport. The contributors have different attitudes and agendas. Some are ecologists, some planners, others social scientists. Focus ranges from identification of threats and amelioration of damaging effects through to future design of transport systems to minimize environmental degradation. Some chapters consider restricted areas of the globe, others the globe itself. Views encompass deep pessimism and cautious optimism. **Field Manual of Illinois**

Mammals Joyce Ellen Hofmann, 2008 **Flattened Fauna** Roger M. Knutson, 1987 A guide to wild animals that are most often seen as flattened specimens along the road also provides information on the eating, mating, and locomotion habits of common roadside animals in North America. *Topography and the Environment* Richard J. Huggett, Jo Cheesman, 2002

Third year and postgraduate courses in physical geography, environmental studies, and environmental science, particularly course units in geomorphology, climatology, pedology, biogeography, ecology, landscape ecology, GIS, and remote sensing, and environmental modelling. This is the first book of its kind focusing on topographic influences on environmental components. As a comprehensive introduction to the subject, *Topography and the Environment* discusses the main facets of topography, including new and old ideas, models, methods, and theories, and identifies four different approaches to topography as an environmental factor: the physical ground surface, all the features of the Earth's surface including the human-made, topographically based modelling developed in association with geographical information systems (GIS) and the idea of place as a human construct. The authors then explore individual topographic influences on environmental elements such as climate, water, soils, and plants. Accessible and wide-ranging, it helps students understand the intrinsic links and the crossdisciplinary

nature of physical systems and processes *Animals In Human Society* Daniel Moorehead,2015-11-03 Including the work of 12 authors from institutions such as Colorado State University Frostburg State University Michigan State University Salisbury University Texas Woman s University University of Birmingham University of California Irvine University of California Merced and William Jessup University Rocklin California the collection of essays explores the broad range of animals who share our planet and attempts to recognize our responsibility as humans to take their interests seriously

Critical Theory and Animal Liberation John Sanbonmatsu,2011-01-16 Critical Theory and Animal Liberation is the first collection to approach our relationship with other animals from the critical or left tradition in political and social thought Breaking with past treatments that have framed the problem as one of animal rights the authors instead depict the exploitation and killing of other animals as a political question of the first order The contributions highlight connections between our everyday treatment of animals and other forms of social power mass violence and domination from capitalism and patriarchy to genocide fascism and ecocide Contributors include well known writers in the field as well as scholars in other areas writing on animals for the first time Among other things the authors apply Freud s theory of repression to our relationship to the animal debunk the Locavore movement expose the sexism of the animal defense movement and point the way toward a new transformative politics that would encompass the human and animal alike *Wisconsin Natural*

Resources ,2005 *Natural History* ,2001 **Ecological Effects of Roads** I F Spellerberg,2002-01-07 This book is a review of the ecological effects of roads These effects include pollution impacts on plant and animal habitats and disturbance to ecological systems Many animals are killed by traffic More importantly new roads fragment natural habitats By far the greatest effects are the cumulative effects over time This is a textbook for students and a manual for the practitioner It provides a detailed account of the methods used to address the ecological effects of roads Controversial in parts e g it is argued that some roads should be decommissioned this book will prompt much discussion and will prompt action to prevent the damaging effects of roads on nature BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved
