

# Lesson 3.1 -- Using and Interpreting Function Notation

**Graphs:**

- can provide an overview of the function
- can be used to find the domain and range of a function
- can be used to find the x and y intercepts of a function
- can be used to find the maximum and minimum of a function
- can be used to find the points of intersection of two functions

**Interpreting a function written in function notation:**

- $f(x)$  represents the output of the function when the input is  $x$ .
- $f(0)$  represents the output of the function when the input is 0.
- $f(10)$  represents the output of the function when the input is 10.
- $f(20)$  represents the output of the function when the input is 20.
- $f(30)$  represents the output of the function when the input is 30.
- $f(40)$  represents the output of the function when the input is 40.
- $f(50)$  represents the output of the function when the input is 50.
- $f(60)$  represents the output of the function when the input is 60.
- $f(70)$  represents the output of the function when the input is 70.
- $f(80)$  represents the output of the function when the input is 80.
- $f(90)$  represents the output of the function when the input is 90.
- $f(100)$  represents the output of the function when the input is 100.

**Check Your Understanding**

1. A graph of  $y = f(x)$  is shown below.

a. What is  $f(2)$ ? **2**

b. What is  $f(4)$ ? **3**

c. What is the function value of  $f(x)$  when  $x = 0$ ?

**$x = 0$  then  $f(x) = 0$**

2. Use this graph to answer the question. The number of people in the area 1000 feet from a house after the house is open. Interpret each of the following statements in context.

a.  $f(1000) = 10$

**When the house is open, 10 people are in the area 1000 feet from the house.**

b.  $f(1000) = 1000$

**The number of people in the area 1000 feet from the house is 1000.**

3. A scientist has discovered that there is a pattern, or rule, that can determine the heading distance a car travels in the air's speed when the car's speed is 10, and then double the speed to 20.

a. Use this rule to predict the heading distance of a car moving through:

**100 ft/sec**

b. Write an equation for this that represents the car's heading distance when driving at a speed of  $x$  miles per hour.

**$f(x) = \frac{x}{10}$**

### **Starting out in Statistics**

Patricia de Winter, Peter M. B. Cahusac, 2014-11-17 To form a strong grounding in human related sciences it is essential for students to grasp the fundamental concepts of statistical analysis rather than simply learning to use statistical software Although the software is useful it does not arm a student with the skills necessary to formulate the experimental design and analysis of a research project in later years of study or indeed if working in research This textbook deftly covers a topic that many students find difficult With an engaging and accessible style it provides the necessary background and tools for students to use statistics confidently and creatively in their studies and future career Key features Up to date methodology techniques and current examples relevant to the analysis of large data sets putting statistics in context Strong emphasis on experimental design Clear illustrations throughout that support and clarify the text A companion website with explanations on how to apply learning to related software packages This is an introductory book written for undergraduate biomedical and social science students with a focus on human health interactions and disease It is also useful for graduate students in these areas and for practitioners requiring a modern refresher
