Grid Computing Fran Berman, Geoffrey Fox, Anthony J. G. Hey, 2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons 1 Its ability to make more cost effective use of a given amount of computer resources 2 As a way to solve problems that can't be approached without an enormous amount of computing power 3 Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective A number of corporations professional groups university consortiums and other groups have developed or are developing frameworks and software for managing grid computing projects The European Community EU is sponsoring a project for a grid for high energy physics earth observation and biology applications In the United States the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people Sun Microsystems offers Grid Engine software Described as a distributed resource management tool Grid Engine allows engineers at companies like Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time the Grid is a very hot topic generating broad interest from research and industry e.g. IBM Platform Avaki Entropia Sun HP Grid architecture enables very popular e Science projects like the Genome project which demand global interaction and networking In recent surveys over 50% of Chief Information Officers are expected to use Grid technology this year Grid Computing Features contributions from the major players in the field Covers all aspects of grid technology from motivation to applications Provides an extensive state of the art guide in grid computing This is essential reading for researchers in Computing and Engineering physicists statisticians engineers and mathematicians and IT policy makers

Pro Spring Batch Michael Minella, 2011-10-12 Since its release Spring Framework has transformed virtually every aspect of Java development including web applications security aspect oriented programming persistence and messaging Spring Batch one of its newer additions now brings the same familiar Spring idioms to batch processing Spring Batch addresses the needs of any batch process from the complex calculations performed in the biggest financial institutions to simple data migrations that occur with many software development projects Pro Spring Batch is intended to answer three questions What is batch processing What does it entail What makes it different from the other applications we are developing What are the challenges inherent in the development of a batch process Why do batch processing Why can't we just process things as we get them Why do we do batch processing differently than the web applications that we currently work on How to implement a robust scalable distributed batch processing system using open source frameworks Pro Spring Batch gives concrete examples of how each piece of functionality is used and why it would be used in a real world application This includes providing tips that the school of hard knocks has taught author Michael Minella during his experience with Spring Batch Pro Spring Batch includes examples of I/O options that are not mentioned in the official user's guide as well as performance tips on things like how to

Grid Resource Management Jarek Nabrzyski, Jennifer M. Schopf, Jan Weglarz, 2012-12-06. Grid Resource Management: State of the Art and Future Trends presents an overview of the state of the field and describes both the real experiences and the current research available today. Grid computing is a rapidly developing and changing field involving the shared and coordinated use of dynamic multi-institutional resources. Grid resource management is the process of identifying requirements, matching resources to applications, allocating those resources, and scheduling and monitoring Grid resources over time in order to run Grid applications as efficiently as possible. While Grids have become almost commonplace, the use of good Grid resource management tools is far from ubiquitous because of the many open issues of the field, including the multiple layers of schedulers, the lack of control over resources, the fact that resources are shared, and that users and administrators have conflicting performance goals.
