Response of Douglas-fir Seedlings to Nitrogen, Sulfur, and Phosphorus Fertilizers M. A. Radwan,1985 *Transport and Interactions of Chlorides in Cement-based Materials* Caijun Shi,Qiang Yuan,Fuqiang He,Xiang Hu,2019-07-26 Chloride induced corrosion is the most important durability issue of reinforced concrete structures and the prediction and prevention of chloride induced corrosion has attracted considerable interest all over the world Given that chloride penetrates through the concrete cover the issues concerning its transport are crucial These include testing methods prediction and the prevention of ingress During the transport process physical and chemical interaction occurs between chloride and cement hydrates which in turn affects the further transport so the transport of chloride and these interactions are closely related and underpin our understanding of chloride induced corrosion in RC structures This book provides in depth discussion of chloride transport and its interaction in cement based materials and reviews and summarizes the state of the art The mechanisms and testing methods for chloride transport chemical interactions of chloride with cement hydrates chloride binding isotherms measurement of penetration depths factors affecting chloride transport and modeling of chloride transport are discussed in detail This book serves as a reference for researchers or engineer and a textbook for graduate students Tailoring Surfaces Nicholas D. Spencer,2011 The focus of the book is the modification of surfaces to tailor them for a specific purpose Using this method of surface modification materials chosen for their bulk properties tensile strength temperature stability density price can be optimized for any particular application which can lead to improved hardness biological inertness or activity corrosion resistance low or high friction or adhesion water repellency or wettability or catalytic activity The works of the author many of his crucial papers are included touches upon these surface properties and spans fields including catalysis analytical surface science self assembled monolayers tribology biomaterials superhydrophobicity and polymer coatings *Synthesis of Solid Catalysts* Krijn P. de Jong,2009-06-22 This practical book combines recent progress with a discussion of the general aspects of catalyst preparation The first part deals with the basic principles of solid catalyst preparation explaining the main aspects of sol gel

chemistry and interfacial chemistry followed by such techniques as co precipitation and immobilization New tools for catalyst preparation research including microspectroscopy and high throughput experimentation are also taken into account The second part heightens the practical relevance by providing six case studies on such topics as the preparation of zeolites hydrotreating catalysts methanol catalysts and gold catalysts
