Questions and Answers in Embedded Contexts Utpal Lahiri, 2002 Linguists and others have realised for some time that predicates of the know and wonder classes behave differently in semantic terms with respect to their interrogative complements but have not so far fully understood how or why This book seeks to explore and to provide solutions to this and to related problems in explaining the meaning and grammar of embedded interrogatives and the predicates that take interrogative complements The investigation extends to the semantics of adverbs of quantification theories of plurals and lexical selection The work is addressed to those working in semantics and to syntacticians concerned with the constraints that syntactic structure imposes on semantic interpretation It is at the heart of current research in the syntax semantics interface Although some knowledge of formal semantics is assumed the book has been written to be accessible to researchers in computer science philosophy and cognitive science *Algebra, Arithmetic and Geometry with Applications* Chris Christensen, Ganesh Sundaram, Avinash Sathaye, Chandrajit Bajaj, 2011-06-27 Proceedings of the Conference on Algebra and Algebraic Geometry with Applications July 19 26 2000 at Purdue University to honor Professor Shreeram S Abhyankar on the occasion of his seventieth birthday Eighty five of Professor Abhyankar s students collaborators and colleagues were invited participants Sixty participants presented papers related to Professor Abhyankar s broad areas of mathematical interest Sessions were held on algebraic geometry singularities group theory Galois theory combinatorics Drinfeld modules affine geometry and the Jacobian problem This volume offers an outstanding collection of papers by expert authors

Cylindric-like Algebras and Algebraic Logic Hajnal Andréka, Miklós Ferenczi, István Németi, 2014-01-27 Algebraic logic is a subject in the interface between logic algebra and geometry it has strong connections with category theory and combinatorics Tarski s quest for finding structure in logic leads to cylindric like algebras as studied in this book they are among the main players in Tarskian algebraic logic Cylindric algebra theory can be viewed in many ways as an algebraic form of definability theory as a study of higher dimensional relations as an enrichment of Boolean Algebra theory or as logic in geometric form cylindric in the name refers to geometric aspects Cylindric like algebras have a wide range of applications in e g natural language theory data base theory stochastics and even in relativity theory The present volume consisting of 18 survey papers intends to give an overview of the main achievements and new research directions in the past 30 years since the publication of the Henkin Monk Tarski monographs It is dedicated to the memory of Leon Henkin *Galois Theory, Hopf Algebras, and Semiabelian Categories* George Janelidze, 2004 This volume is based on talks given at the Workshop on Categorical Structures for Descent and Galois Theory Hopf Algebras and Semiabelian Categories held at The Fields Institute for Research in Mathematical Sciences Toronto ON Canada The meeting brought together researchers working in these interrelated areas This collection of survey and research papers gives an up to date account of the many current connections among Galois theories Hopf algebras and semiabelian categories The book features articles by leading researchers on a wide

range of themes specifically abstract Galois theory Hopf algebras and categorical structures in particular quantum categories and higher dimensional structures Articles are suitable for graduate students and researchers specifically those interested in Galois theory and Hopf algebras and their categorical unification **Algebraic and Logic Programming** Giorgio

Invariant Means and Finite Representation Theory of C^* -Algebras Nathaniel Patrick Brown, 2006 Various subsets of the tracial state space of a unital C algebra are studied The largest of these subsets has a natural interpretation as the space of invariant means II_1 factor representations of a class of C algebras considered by Sorin Popa are also studied These algebras are shown to have an unexpected variety of II_1 factor representations In addition to developing some general theory we also show that these ideas are related to numerous other problems in operator algebras Algebraic Geometry.

Partially Ordered Rings and Semi-Algebraic Geometry Gregory W. Brumfiel, 1979-12-20 The purpose of this unique book is to establish purely algebraic foundations for the development of certain parts of topology Some topologists seek to understand geometric properties of solutions to finite systems of equations

or inequalities and configurations which in some sense actually occur in the real world Others study spaces constructed more abstractly using infinite limit processes Their goal is to determine just how similar or different these abstract spaces are from those which are finitely described However as topology is usually taught even the first more concrete type of problem is approached using the language and methods of the second type Professor Brumfiel's thesis is that this is unnecessary and in fact misleading philosophically He develops a type of algebra partially ordered rings in which it makes sense to talk about solutions of equations and inequalities and to compare geometrically the resulting spaces The importance of this approach is primarily that it clarifies the sort of geometrical questions one wants to ask and answer about those spaces which might have physical significance
