Group 1: Earth-Sun Interactions

Question 1: How is Earth's geomagnetic field generated? How does it vary? What happens when it is disrupted? How does it affect Earth's atmosphere and space environment? How does it affect Earth's climate?

Answer 1: The Earth's magnetic field is generated by the motion of molten iron in the outer core, which is driven by convection. The field is not uniform, but it is generally aligned with the Earth's axis. It varies in strength and direction over time, and it is disrupted by external magnetic fields, such as those from the Sun. The field affects Earth's atmosphere and space environment, and it also affects Earth's climate.
