LAWS, LANGUAGE and LIFE Howard Hunt Pattee, Joanna Rączaszek-Leonardi, 2012-12-09 Howard Pattee is a physicist who for many years has taken his own path in studying the physics of symbols which is now a foundation for biosemiotics By extending von Neumann's logical requirements for self replication to the physical requirements of symbolic instruction at the molecular level he concludes that a form of quantum measurement is necessary for life He explains why all non dynamic symbolic and informational controls act as special allosteric constraints on dynamical systems Pattee also points out that symbols do not exist in isolation but in coordinated symbol systems we call languages Such insights turn out to be necessary to situate biosemiotics as an objective scientific endeavor By proposing a way to relate quiescent symbolic constraints to dynamics Pattee's work builds a bridge between physical biological and psychological models that are based on dynamical systems theory Pattee's work awakes new interest in cognitive scientists where his recognition of the necessary separation the epistemic cut between the subject and object provides a basis for a complementary third way of relating the purely symbolic computational models of cognition and the purely dynamic non representational models This selection of Pattee's papers also addresses several other fields including hierarchy theory artificial life self organization complexity theory and the complementary epistemologies of the physical and biological sciences

Learning From Text Across Conceptual Domains Cynthia R. Hynd, 2013-12-16 This volume is an attempt to synthesize the understandings we have about reading to learn Although learning at all ages is discussed in this volume the main focus is on middle and high school classrooms critical spaces of learning and thinking The amount of

knowledge presented in written form is increasing and the information we get from texts is often conflicting. We are in a knowledge explosion that leaves us reeling and may effectively disenfranchise those who are not keeping up. There has never been a more crucial time for students to understand, learn from, and think critically about the information in various forms of text. Thus, understanding what it means to learn is vital for all educators. Learning from text is a complex matter that includes student factors, social, ethnic, and cultural differences, as well as varying motivations, self-perceptions, goals, and needs. Instructional and teacher factors and disciplinary and social factors. One important goal of the book is to encourage practicing teachers to learn to consider their students in new ways, to see them as being influenced by and as influencing not just the classroom but the total fabric of the disciplines they are learning. Equally important, it is intended to foster further research efforts from local studies of classrooms by teachers to large-scale studies that produce generalizable understandings about learning from text. This volume, a result of the editor's and contributors' work with the National Reading Research Center, will be of interest to all researchers, graduate students, practicing teachers, and teachers in training who are interested in understanding the issues that are central to improving students' learning from text.

Essential Readings in Biosemiotics Donald Favareau, 2010-06-10. Synthesizing the findings from a wide range of disciplines from biology and anthropology to philosophy and linguistics, the emerging field of Biosemiotics explores the highly complex phenomenon of sign processing in living systems. Seeking to advance a naturalistic understanding of the evolution and development of sign-dependent life processes, contemporary biosemiotic theory offers important new conceptual tools for the scientific understanding of mind and meaning for the development of artificial intelligence and for the ongoing research into the rich diversity of non-verbal human, animal, and biological communication processes. Donald Favareau's *Essential Readings in Biosemiotics* has been designed as a single-source overview of the major works informing this new interdisciplinary and provides scholarly historical and analytical commentary on each of the texts presented. The first of its kind, this book constitutes a valuable resource to both bioscientists and to semioticians interested in this emerging new discipline and can function as a primary textbook for students in biosemiotics as well. Moreover, because of its inherently interdisciplinary nature and its focus on the big questions of cognition, meaning, and evolutionary biology, this volume should be of interest to anyone working in the fields of cognitive science, theoretical biology, philosophy of mind, evolutionary psychology, communication studies, or the history and philosophy of science.
