

Masterclass on: The National Maternal and Perinatal Care Guidelines

Part 1

The National Department of Health has identified maternal and new-born health care as a priority area requiring urgent action in South Africa. The Saving Mothers and Saving Babies Reports have recommended regular updating and strengthening of guidelines on the clinical management of the common causes of maternal and new-born deaths in South Africa, hence the publishing of the updated National Integrated Maternal and Perinatal Care Guidelines for South Africa.

The guidelines contain the basic minimum that needs to be known by all professional nurses, clinical associates and doctors. Their use will lower high maternal and perinatal morbidity and mortality rates and improve the quality of care for women, their babies, and their families.

Masterclass Objectives

The **part 1** masterclass content is structured as follows:

- Respectful maternity care
- Maternal mental health
- Intimate partner violence and domestic violence
- Antenatal care
- Maternal nutrition
- Early pregnancy complications
- Normal labour and delivery - intrapartum care
- Fetal monitoring
- Induction of labour
- Problems in pregnancy
- Abnormal labour and delivery
- Caesarean delivery

Monitoring HIV Care in the United States Institute of Medicine, Board on Population Health and Public Health Practice, Committee to Review Data Systems for Monitoring HIV Care, 2012-08-13 The number of people living with HIV/AIDS in the United States is growing each year largely due both to advances in treatment that allow HIV-infected individuals to live longer and healthier lives and due to a steady number of new HIV infections each year. The U.S. Centers for Disease Control and Prevention (CDC) estimates that there were 1.2 million people living with HIV infection in the United States at the end of 2008, the most recent year for which national prevalence data are available. Each year approximately 16,000 individuals die from AIDS despite overall improvements in survival and 50,000 individuals become newly infected with HIV. In 2011, the CDC estimated that about three in four people living with diagnosed HIV infection are linked to care within 3 to 4 months of diagnosis and that only half are retained in ongoing care. In the context of the continuing challenges posed by HIV, the White House Office of National AIDS Policy (ONAP) released a National HIV/AIDS Strategy (NHAS) for the United States in July 2010. The primary goals of the NHAS are to reduce HIV incidence, increase access to care, and optimize health outcomes and reduce HIV-related health disparities. Monitoring HIV Care in the United States addresses existing gaps in the collection, analysis, and integration of data on the care and treatment experiences of PLWHA. This report identifies critical data and indicators related to continuous HIV care and access to supportive services, assesses the impact of the NHAS and the ACA on improvements in HIV care, and identifies public and private data systems that capture the data needed to estimate these indicators. In addition, this report addresses a series of specific questions related to the collection, analysis, and dissemination of such data. Monitoring HIV Care in the United States is the first of two reports to be prepared by this study. In a forthcoming report also requested by ONAP, the committee will address the broad question of how to obtain national estimates that characterize the health care of people living with HIV in the United States. The second report will include discussion of challenges and best practices from previous large-scale and nationally representative studies of PLWHA as well as other populations.
