Paint and Surface Coatings R Lambourne, T A Strivens, 1999-08-23 This second edition of an established and well-received book has been carefully revised in many instances by the original authors and enlarged by the addition of two completely new chapters. These deal with the use of computers in the paint industry and with the increasingly important subject of health and safety. The chapter on pigments has also been re-written by an author new to this edition. It was the editor's intention in the first edition to provide science graduates entering the paint industry with a bridge between academia and the applied science and technology of paints. The great strength and appeal of this book remains that it deals with the technology of paints and surface coatings while also providing a basic understanding of the chemistry and physics of coatings. Extensive revision of first edition. New chapter on computers and modelling. New chapter on health and safety.

Integrated Fault Seal Analysis S. Ogilvie, S. Dee, R.W. Wilson, W. Bailey, 2020-08-03 Faults commonly trap fluids such as hydrocarbons and water and therefore are of economic significance. During hydrocarbon field development, smaller faults can provide baffles and/or conduits to flow. There are relatively simple, well-established workflows to carry out a fault seal analysis for siliciclastic rocks based primarily on clay content. There are, however, outstanding challenges related to other rock types, to calibrating fault seal models with static and dynamic data, and to handling uncertainty. The variety of studies presented here demonstrate the types of data required and workflows followed in today's environment in order to understand the uncertainties, risks, and upsides associated with fault-related fluid flow. These studies span all parts of the hydrocarbon value

chain from exploration to production but are also of relevance for other industries such as radioactive waste and CO2 containment *Catalog of Copyright Entries. Third Series* Library of Congress.
