Characterizing Multiparticle Entanglement Using the Schmidt Decomposition of Operators Sophia Denker, 2024-01-03 Characterizing entanglement is an important issue in quantum information as it is considered to be a resource for many applications such as quantum key distribution or quantum metrology One useful tool to detect and quantify entanglement are witness operators A standard way to construct them is based on the fidelity of pure states and mathematically relies on the Schmidt decomposition of vectors In this book a method to build entanglement witnesses using the Schmidt decomposition of operators is presented One can show that these are strictly stronger than the fidelity witnesses Moreover the concept can be generalized easily to the multipartite case and one may use it to quantify the dimensionality of entanglement Finally this scheme will be used to provide two algorithms that can be combined to improve given witnesses for multiparticle entanglement The Boston Composers Project Boston Area Music Libraries, 1983 The bibliography lists nearly 5 000 compositions by 200 composers of jazz and art music indicating where scores or realizations can be purchased rented or borrowed and which Boston area libraries have them in their collections Ruth, the Christian Scientist John Chester, 1888
