

Connecting the Alice PDx to a therapy device

The Alice PDx interfaces with, and fully supports, certain therapy devices with serial or SmartCard connections. When using the Alice PDx, a provider can specify which treatment data to capture along with the appropriate diagnostic channel data. Depending on the Alice PDx configuration selected, it will record up to eight channels such as:

- Patient airflow
- Pressure
- Leak
- Tidal volume
- Event flags (from auto-titrating devices)

This data allows the provider to confirm the therapeutic benefit of the prescribed therapy device for the patient. Once connected to the therapy device, the Alice PDx will record data from the device during the sleep study. Using the pressure cannula port, the Alice PDx can be connected to other therapy devices, however more limited patient airflow and pressure data will be collected.

Connecting a memory card reader to a computer

After recording, the memory card is removed from the Alice PDx and placed into the provided "plug-and-play" SD card reader. The patient's data is then imported from the SD card to a computer for quick review and analysis.

Optional ECG and ExG yokes

When level II testing is needed, the Alice PDx can be interfaced to optional ECG and ExG sensor interface yokes. The ECG yoke consists of five electrode inputs, considered in cardiology to be a three-lead ECG. This provides three measured and four derived ECG channels to help assess sleep apnea in patients with possible cardiac comorbidities. The Alice PDx optional ECG yoke can provide one-, six- and seven-channel configurations.

The optional ExG yoke provides 13 inputs to provide four EEG/EOG channels and three EMG channels, including ground and references. This enables level II application for advanced sleep analysis.

Multi-night recordings

With the SD card memory and two- to three-night battery life, the Alice PDx can collect information from multi-night recordings when needed. The Alice PDx can be set to start and stop recording automatically to minimize the risk of the patient forgetting to set it.
