Algebra End Of Year Project:

Summaries of Projects Completed in Fiscal Year ..., 1977 *Ten Cheap Lessons: Easy, Engaging Ideas for Every Secondary Classroom* Tom DeRosa, 2008-01-22 Ten Cheap Lessons is not your ordinary teacher resource book. If you're tired of compilations of meaningless worksheets and boring busy work passing themselves off as exciting hands-on activities, you're not alone. This book is designed for real-life classrooms where teachers have no time, no budget, and eager students just waiting for something to engage them. This book contains ten complete ideas that can be easily adapted for any topic in any secondary subject area. It's meant to be as easy as possible for any teacher to start using immediately. Summaries of Projects Completed in Fiscal Year ... National Science Foundation (U.S.), 1979 Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds. Based on empirical findings gathered in several countries on five continents, it provides a wealth of best practices for teaching early algebra. Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra, well-known authors such as Luis Radford, John Mason, Maria Blanton, Deborah Schifter, and Max Stephens, as well as younger scholars from Asia, Europe, South Africa, the Americas, Australia, and New Zealand, present novel theoretical perspectives and their latest findings. The book is divided into three parts that focus on: i) epistemological/mathematical aspects of algebraic thinking; ii) learning; and iii) teaching and teacher development. Some of the main threads running through the book are the various ways in which structures can express themselves in children's developing algebraic thinking, the roles of generalization and natural language, and the emergence of symbolism. Presenting vital new data from international contexts, the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades. *Algebra Activities from Many Cultures* Beatrice Lumpkin, 1997 Enhances understanding with 60 reproducible activities designed with the NCTM Standards in mind. Demonstrates the applications of algebra in different cultures. Develops critical thinking and problem-solving skills with individual and group projects. Lessons Learned from Research on Mathematics Curriculum Denise R. Thompson, Mary Ann Huntley, Christine Suurtamm, 2024-09-01 This volume focuses on research related to mathematics curriculum. But rather than focusing on results of research, it focuses on lessons learned about conducting research on curriculum, whether about design and development, analysis of curriculum in the form of official standards or textbook instantiations, teacher intentions related to curriculum implementation, or actual classroom enactment. For scholars interested in curriculum research, the volume offers lessons about conducting curriculum research that have been learned by others engaged in such work, including frameworks, tools, and techniques, as well as challenges and issues faced with solutions to address them. Sharing lessons from authors of different countries strengthens the broader mathematics research community and provides insights that can help researchers make important strides forward in research on mathematics.
