

NAME _____

LAB TIME/DATE _____

The Fetal Skeleton

1. Are the same skull bones seen in the adult also found in the fetal skull? Yes
2. How does the size of the fetal face compare to its cranium? Face is foreshortened, overshadowed by the large cranium. Maxillae and mandible are very tiny.

How does this compare to the adult skull? In the adult the cranium is proportionately smaller and the facial bones are proportionately larger and more prominent.

3. What are the outward conical projections on some of the fetal cranial bones? These are ossification (growth) centers.
4. What is a fontanel? A fibrous membrane connecting fetal skull bones.
What is its fate? Progressively ossified; replaced by a suture.
What is the function of the fontanels in the fetal skull? Allow fetal skull to be compressed slightly during birth passage; allow for fetal (and infant) brain growth.

5. Describe how the fetal skeleton compares with the adult skeleton in the following areas:

cranium: In the fetus, with the anterior fontanelles different, still somewhat present.

mandibles: In the fetus the teeth, dentures, and pulp are separate from, in the adult they grow the top teeth under pulp, at joint bones.

scapula and humerus: Not ossified in the fetus.

clavicle: An important joint are not fused in the fetus.

basal bones: Alar and sphenoid in the fetus, absent in the adult.

pubis: Not as close in the fetus, sphenoid is ossified.

basal hyo hyoid: Unossified anteriorly, posteriorly ossified anterior, not close together in the fetus.

Answers For Exercise 12 The Fetal Skeleton
