Bodlaender, Giuseppe F. Italiano, 2013-08-16 This book constitutes the refereed proceedings of the 21st Annual European Symposium on Algorithms ESA 2013 held in Sophia Antipolis France in September 2013 in the context of the combined conference ALGO 2013 The 69 revised full papers presented were carefully reviewed and selected from 303 initial submissions 53 out of 229 in track Design and Analysis and 16 out of 74 in track Engineering and Applications The papers in this book present original research in all areas of algorithmic research including but not limited to algorithm engineering algorithmic aspects of networks algorithmic game theory approximation algorithms computational biology computational finance computational geometry combinatorial optimization data compression data structures databases and information retrieval distributed and parallel computing graph algorithms hierarchical memories heuristics and meta heuristics mathematical programming mobile computing on line algorithms parameterized complexity pattern matching quantum computing randomized algorithms scheduling and resource allocation problems streaming algorithms **Anisotropic Isoperimetric Problems and Related Topics** Valentina Franceschi, Alessandra Pluda, Giorgio Saracco, 2024-12-18 This book contains contributions from speakers at the Anisotropic Isoperimetric Problems hence it also appears in describing systems of particles where a balance between attractive and repulsive forces appears A prominent example is that of Gamow s liquid drop model for atomic nuclei where protons are subject to the strong nuclear attractive

force represented by the perimeter and the electromagnetic repulsive force represented by a nonlocal term. Such a model has been shown to be sound as it explains the basic characteristics of the nuclei and it successfully predicts nuclear fission for nuclei with a large atomic number. Similar energy functionals model various physical and biological systems showcasing the competition between short range interfacial and long range nonlocal terms leading to pattern formation. The authors mention e.g. the Ohta-Kawasaki model for microphase separation of diblock copolymers and the Yukawa potential for colloidal systems. Despite diverse systems the emergence of microphases follows similar patterns although rigorously proving this phenomenon remains a challenge. The book collects several contributions within these topics shedding light on the current state of the art.
