Minghan Ye, Changzheng Yuan

2013 Physical Sciences March Paper 1 Memorandum:

30 Years Of Bes Physics - Proceedings Of The Symposium On 30 Years Of Bes Physics Minghan Ye, Changzheng Yuan, 2020-06-05 BES the Beijing Spectrometer began its first groundbreaking physics run thirty years ago in 1989 This is the first high energy physics experiment in China and has been unique throughout the world for its thorough and extended coverage of the tau and charm energy region Since then the BES detector has undergone steady improvements upgrading to BESII in 1998 and to BESIII in 2008 Over the same period the collaboration has expanded from 150 members across 10 institutions in China and the United States to about 500 members across 72 institutions and 15 countries The physics program too has extended from light hadron spectroscopy tau and charm physics to the discovery of exotic charmonium like states precision tests of the Standard Model of particle physics and searches for new physics beyond the Standard Model This special volume collects the proceedings of the symposium held at the Institute of High Energy Physics Beijing in celebration of the 30 year span of achievements and progress at the BES BESII and BESIII experiments Written by many leaders of the BES collaborations these proceedings document the early days of the BES experiments important milestones and the future physics program at BESIII

The Secure and the Dispossessed Nick Buxton, Ben Hayes, 2015-11-20 While the world's scientists and many of its inhabitants despair at the impact of climate change corporate and military leaders see nothing but opportunities For them melting ice caps mean newly accessible fossil fuels borders to be secured from climate refugees social conflicts to be managed and more failed states in which to intervene They are securing their assets at the expense of the planet and its inhabitants The Secure and the Dispossessed looks at these deadly approaches with a critical eye It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy food and water Topics covered include geoengineering militarism refugee protection greenwashing and the agricultural crisis among others Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures

Investing in Science Massimo Florio, 2019-10-15 A proposal for using cost benefit analysis to evaluate the socioeconomic impact of public investment in large scientific projects Large particle accelerators outer space probes genomics platforms all are scientific enterprises managed through the new form of the research infrastructure in which communities of scientists collaborate across nations universities research institutions and disciplines Such large projects are often publicly funded with no accepted way to measure the benefits to society of these investments In this book Massimo Florio suggests the use of cost benefit analysis CBA to evaluate the socioeconomic impact of public investment in large and costly scientific projects The core concept of CBA of any infrastructure is to undertake the consistent intertemporal accounting of social welfare effects using the available information Florio develops a simple framework for such accounting in the research infrastructure context and then offers a systematic analysis of the benefits in terms of the social agents

involved He measures the benefits to scientists students and postdoctoral researchers the effect on firms of knowledge spillovers the benefits to users of information technology and science based innovation the welfare effects on the general public of cultural services provided by RIs and the willingness of taxpayers to fund scientific knowledge creation Finally Florio shows how these costs and benefits can be expressed in the form of stochastic net present value and other summary indicators A History of Scientific Journals Aileen Fyfe,Noah Moxham,Julie McDougall-Waters,Camilla Mørk

Røstvik,2022-10-03 Modern scientific research has changed so much since Isaac Newton s day it is more professional collaborative and international with more complicated equipment and a more diverse community of researchers Yet the use of scientific journals to report share and store results is a thread that runs through the history of science from Newton s day to ours Scientific journals are now central to academic research and careers Their editorial and peer review processes act as a check on new claims and findings and researchers build their careers on the list of journal articles they have published The journal that reported Newton s optical experiments still exists First published in 1665 and now fully digital the Philosophical Transactions has carried papers by Charles Darwin Dorothy Hodgkin and Stephen Hawking It is now one of eleven journals published by the Royal Society of London Unrivalled insights from the Royal Society s comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing The editorial management business practices and financial difficulties of the Philosophical Transactions and its sibling Proceedings reveal the meaning and purpose of journals in a changing scientific community At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history **This Changes Everything** Naomi Klein,2014-09-16

With strong first hand reporting and an original provocative thesis Naomi Klein returns with this book on how the climate crisis must spur transformational political change **Across Space and Time** Arianna Traviglia,2025-10-01 This volume presents a selection of the best papers presented at the forty first annual Conference on Computer Applications and Quantitative Methods in Archaeology The theme for the conference was Across Space and Time and the papers explore a multitude of topics related to that concept including databases the semantic Web geographical information systems data collection and management and more *Scientists at War* Sarah Bridger,2015-04-06 Sarah Bridger examines the ethical debates that tested the U S scientific community during the Cold War and scientists contributions to military technologies and strategic policymaking from the dawning atomic age through the Strategic Defense Initiative Star Wars in the 1980s which sparked cross generational opposition among scientists The Double Game James Cameron,2018 How did the United States move from a position of nuclear superiority over the Soviet Union at the beginning of the 1960s to one of nuclear parity under the doctrine of mutual assured destruction in 1972 Drawing on declassified records of conversations three presidents had with their most trusted advisors James Cameron offers an original answer to this question John F Kennedy Lyndon Johnson and Richard Nixon struggled to reconcile their personal convictions about the nuclear arms race

with the views of the public and Congress. In doing so they engaged in a double game hiding their true beliefs behind a facade of strategic language while grappling in private with the complex realities of the nuclear age. Cameron shows how despite reservations about the nuclear buildup Kennedy and Johnson pushed ahead with an anti ballistic missile ABM system for the United States fearing the domestic political consequences of scrapping both the system and the popular doctrine of strategic superiority that underpinned it. By contrast the abrupt decline in US public and congressional support in 1969 forced Nixon to give up America's first ABM and the US lead in offensive ballistic missiles through agreements with the Soviet Union despite his conviction that the US needed a nuclear edge to maintain the security of the West. By placing this dynamic at the center of the story *The Double Game* provides a new overarching interpretation of this pivotal period in the development of US nuclear policy and a window onto current debates over nuclear superiority deterrence and the future of American grand strategy.

Analog Microelectronics Mattia Bargarino, 2025-09-10 This textbook uses an innovative fresh and rigorous approach to the analysis of analog circuits. The author guides students to leverage the psycho cognitive concept of basic pattern as an efficient calculation tool going beyond its traditional use for the qualitative visual inspection. In this journey the reader is not left alone to face statements such as it is easy to prove that or it has been proven elsewhere that. All formulas and theorems are proven step by step. In particular the proofs of the theorems on frequency response and stability have been made as intuitive as possible. The author thus demystifies and makes available to the student these relevant theorems which are usually scattered over decades of reading and or in several textbooks and papers. Two chapters focus on exercises of increasing difficulty most of them discussed fully and solved step by step allowing students to strengthen and test their knowledge. Moreover the first two chapters introduce the history of microelectronics and physics of fundamental electron devices.

Corporate Social Responsibility James Weber, David Wasieleski, 2018-05-14 Volume Two of *Business and Society* 360 focuses on research drawn from work grounded in corporate social responsibility and corporate citizenship.
