Funke, Magda Osman, Annette Kluge**

2013 Trial Life Orientation:

Life-Oriented Behavioral Research for Urban Policy Junyi Zhang, 2017-01-03 This book presents a life oriented approach which is an interdisciplinary methodology proposed for cross sectoral urban policy decisions such as transport health and energy policies Improving people s quality of life QOL is one of the common goals of various urban policies on the one hand while QOL is closely linked with a variety of life choices on the other The life oriented approach argues that life choices in different domains e g residence neighborhood health education work family life leisure and recreation finance and travel behavior are not independent of one another and ignorance of and inability to understand interdependent life choices may result in a failure of consensus building for policy decisions The book provides evidence about behavioral interdependencies among life domains based on both extensive literature reviews and case studies covering a broad set of life choices This work further illustrates interbehavioral analysis frameworks with respect to various life domains along with a rich set of future research directions This book deals with life choices in a relatively general way Thus it can serve not only as a reference for research but also as a textbook for teaching and learning in varied behavior related disciplines

Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek, Joachim Funke, Magda Osman, Annette Kluge, 2018-09-28 Complex problem solving CPS and related topics such as dynamic decision making DDM and complex dynamic control CDC represent multifaceted psychological phenomena In abroad sense CPS encompasses learning decision making and acting in complex and dynamic situations Moreover solutions to problems that people face in such situations are often generated in teams or groups This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions This framing of

CPS means that it is not a single construct that can be measured by using a particular type of CPS task e.g. minimal complex system tests which is a view taken by the psychometric community. The proposed approach taken here is that because CPS is multifaceted, multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other. Thus, this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holistic approach to investigating and theorizing about these abilities. The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS, DDM, and CDC. This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another, what learning conditions result in transferable knowledge and skills, and how these features can be trained.

This handbook integrates and discusses a growing evidence base concerning individual development across middle and late adulthood. The book includes a comprehensive analysis of what growth implies within midlife and older age and considers how different developmental areas are intertwined, i.e. physical, cognitive, social, and emotional development, as well as personality growth. As the gap between theory and practice still constitutes an issue in developmental research, the handbook also aims to provide illustrative examples of prevention and intervention from a positive psychology perspective. These were selected to represent a variety of topics relevant for individual development where research informs practice, ranging from happiness, grandparenthood, love, and sexuality to loneliness, depression, anxiety, suicide prevention, and coping with death.
