Lacković, Darko Vasic, 2014-09-02 This volume presents the Proceedings of the 6th European Conference of the International Federation for Medical and Biological Engineering MBEC2014 held in Dubrovnik September 7-11, 2014. The general theme of MBEC 2014 is Towards new horizons in biomedical engineering. The scientific discussions in these conference proceedings include the following themes: Biomedical Signal Processing, Biomedical Imaging and Image Processing, Biosensors and Bioinstrumentation, Bio-Micro-Nano Technologies, Biomaterials, Biomechanics, Robotics and Minimally Invasive Surgery, Cardiovascular, Respiratory and Endocrine Systems Engineering, Neural and Rehabilitation Engineering, Molecular, Cellular and Tissue Engineering, Bioinformatics and Computational Biology, Clinical Engineering and Health Technology Assessment, Health Informatics, E-Health and Telemedicine, Biomedical Engineering Education. ECAI 2014 T. Schaub, G. Friedrich, B.

O'Sullivan, 2014-08 The role of artificial intelligence (AI) applications in fields as diverse as medicine, economics, linguistics, logical analysis and industry continues to grow in scope and importance. AI has become integral to the effective functioning of much of the technical infrastructure we all now take for granted as part of our daily lives. This book presents the papers from the 21st biennial European Conference on Artificial Intelligence (ECAI 2014) held in Prague, Czech Republic in August 2014. The ECAI conference remains Europe's principal opportunity for researchers and practitioners of Artificial Intelligence to gather and to discuss the latest trends and challenges in all subfields of AI as well as to demonstrate innovative applications and uses of advanced AI technology. Included here are the 158 long papers and 94 short papers selected for presentation at the conference. Many of the papers cover the fields of knowledge representation, reasoning and logic as well as agent-based and multi-agent systems, machine learning and data mining. The proceedings of PAIS 2014 and the PAIS System Demonstrations are also included in this volume, which will be of interest to all those wishing to keep abreast of the latest developments in the field of AI.

Essential Readings in Problem-Based Learning Andrew Walker, Heather Leary, Cindy Hmelo-Silver, 2015-01-15 Like most good educational interventions, problem-based learning (PBL) did not grow out of theory but out of a practical problem. Medical students were bored, dropping out and unable to apply what they had learned in lectures to their practical experiences. A couple of years later, Neurologist Howard S. Barrows reversed the sequence, presenting students with patient problems to solve in small groups and requiring them to seek relevant knowledge in an effort to solve those problems. Out of his work, PBL was born. The application of PBL approaches has now spread far beyond medical education. Today, PBL is used at levels from elementary school to adult education in disciplines ranging across the humanities and sciences and in both academic and corporate settings. This book aims to take stock of developments in the field and to bridge the gap between practice and the theoretical tradition originated by Barrows that underlies PBL techniques. *Neural & Bio-inspired Processing and Robot Control* Huanqing Wang, 2019-01-24 This Research Topic

presents bio inspired and neurological insights for the development of intelligent robotic control algorithms This aims to bridge the inter disciplinary gaps between neuroscience and robotics to accelerate the pace of research and development

EMBEC & NBC 2017 Hannu Eskola,Outi Väisänen,Jari Viik,Jari Hyttinen,2017-06-12 This volume presents the proceedings of the joint conference of the European Medical and Biological Engineering Conference EMBEC and the Nordic Baltic Conference on Biomedical Engineering and Medical Physics NBC held in Tampere Finland in June 2017 The proceedings present all traditional biomedical engineering areas but also highlight new emerging fields such as tissue engineering bioinformatics biosensing neurotechnology additive manufacturing technologies for medicine and biology and bioimaging to name a few Moreover it emphasizes the role of education translational research and commercialization 8th International Conference on Bioinformatics and Biomedical Engineering (iCBBE) ,2014-09-17 It is my great pleasure to present the proceedings of the 8th International Conference on Bioinformatics and Biomedical Engineering ICBBE 2014 held in Suzhou China September 20 22 2014 I would like to take this opportunity to express my sincere thanks to all the authors and participants for their support to our conference The continuous researches on Bioinformatics and Biomedical Engineering are now of critical significance to the sustainable development of science education culture and the society Especially in modern times it plays an important role in the interdisciplinary field among the life science mathematical science computer science and electronic information science More and more scholars and practitioners both within China and abroad are committed themselves to the cause of this area With the development of society and technology a great variety of research results are emerging Here ICBBE provides a platform for academic professionals and industry players to exchange the most updated information and achievements in those exciting research areas On behalf of the organizing committee I would like to express my gratitude to our sponsors Wuhan University and Engineering Information Institute At the same time we appreciate the contribution from all the paper reviewers and the committee members It is impossible to organize such a conference without their help The papers in the proceedings of ICBBE provide details beyond what is possible to be included in an oral presentation and constitute a concise but timely medium for the dissemination of recent research results I hope that you can find these proceedings interesting exciting and informative Thanks again for your support to the ICBBE conference Prof Kuo Chen Chou ICBBE 2014 Committee Chair **Biosignal Processing and Computational Methods to Enhance Sensory Motor Neuroprosthetics** Mitsuhiro Hayashibe,David Guiraud,Jose L. Pons,Dario Farina,2016-01-22 Though there have been many developments in sensory motor prosthetics they have not yet reached the level of standard and worldwide use like pacemakers and cochlear implants One challenging issue in motor prosthetics is the large variety of patient situations which depending on the type of neurological disorder To improve neuroprosthetic performance beyond the current limited use of such systems robust bio signal processing and model based control involving actual sensory motor state with biosignal feedback would bring about new modalities and applications and

could be a breakthrough toward adaptive neuroprosthetics Recent advances of Brain Computer Interfaces BCI now enable patients to transmit their intention of movement However the functionality and controllability of motor prosthetics itself can be further improved to take advantage of BCI interfaces In this Research Topic we welcome contribution of original research articles computational and experimental studies review articles and methodological advances related to biosignal processing that may enhance the functionality of sensory motor neuroprosthetics The scope of this topic includes but is not limited to studies aimed at enhancing 1 computational biosignal processing in EMG Electromyography EEG Electroencephalography and other modalities of biofeedback information 2 the computational method in modeling and control of sensory motor neuroprosthetics 3 the systematic functionality aiming to provide solutions for specific pathological movement disorders 4 human interfaces such as BCI but in the case of BCI study manuscripts should be experimental studies which are applied to sensory motor neuroprosthetics in patients with motor disabilities

Fragmentation in Sleep and Mind: Linking Dissociative Symptoms, Sleep, and Memory Sue Llewellyn, Dalena van Heugten - van der Kloet, 2018-03-27 Fragmented dissociated consciousness can characterize the mind in both wake and sleep states Dissociative symptoms during sleep include vivid dreaming nightmares and alterations in objective sleep parameters e g lengthening of REM sleep During waking hours dissociative symptoms exhibit disparate characteristics encompassing memory problems excessive daydreaming absentmindedness and impairments and discontinuities in perceptions of the self identity and the environment Llewellyn has theorized that a progressive and enduring de differentiation of wake and dream states of consciousness eventually results in schizophrenia a lesser degree of de differentiation may have implications for dissociative symptoms Against a background of de differentiation between the dream and wake states the papers in this volume link consciousness memory and mental illness with a special interest for dissociative symptoms

Physical Activity, Self-Regulation, and Executive Control Across the Lifespan Sean P. Mullen, Peter Hall, 2016-02-05 There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise induced cognitive and brain health enhancement a list that ranges from molecular changes to systemic changes in executive control and neural connectivity A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior In accordance with this view physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control Executive control is a limited resource and the aging process depletes this resource People who regularly exercise are said to have higher self regulatory control planning goal shielding and impulse control than irregular exercisers The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures Indeed a handful of studies have shown the relationship between greater executive control and

subsequently higher levels of physical activity However little is known about the neural correlates of physical activity adherence or sedentary behavior with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors No research has focused on the brain networks responsible for the self regulation of physical activity which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors Interdisciplinary investigations are needed to explain the extent to which physical activity self regulation and self regulatory failure is dependent upon or under the influence of executive control processes and brain networks Understanding the degree to which self regulatory resources may be enhanced restored and trained will have enormous implications for basic science and applied fields It is also of great import to understand whether or not physical activity self regulation is a domain specific behavior associated with specific brain networks or to determine the extent to which regulatory network sharing occurs The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior self regulation and executive control For this Research Topic we therefore solicit reviews original research articles and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior self regulatory strategies cognitive performance and brain structure and function While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations and methodological innovations This Frontiers Research Topic will carve out new directions for the fields of exercise cognitive and social neurosciences We hope you will consider submitting your work
