Inequality and Stagnation Santiago Capraro, Carlo Panico, Luis Torres-González, 2024-08-02 The book examines how the outgrowth of the financial industry has contributed to the recent tendencies towards inequality and stagnation. It proposes a monetary interpretation of these events using a Classical Keynesian theoretical approach derived from the work of Keynes and Sraffa. The approach moves from the distributive conflicts among economic and social groups, presuming that they influence the legislation shaping the organisation of the markets and the policy of the authorities. It argues that the degrees of liquidity of assets, which reflect the individual perceptions of their future prices, ultimately depend on the organisation of the markets and policy decisions. The development of his work persuaded Keynes that it was necessary to revolutionise the scientific foundations of economic discipline to effectively interpret events and recommend policies. He consequently introduced in 1932 a monetary theory of production. Following these lines, Sraffa proposed in *Production of Commodities* to take the rate of interest as an independent variable in the theory of distribution. Using the Classical Keynesian approach, the book shows how the changes in legislation and policies since the abandonment of the Bretton Woods agreements have caused the outgrowth of finance and how these alterations have raised financial instability. It identifies various competitive mechanisms through which financial events can affect income distribution and growth, describing how they have triggered the recent tendencies towards inequality and stagnation. This book is essential reading for researchers studying the interactions among financial markets, distribution and growth **Oswaal UPSC CSE Prelims 15 Mock Test Papers |**
