Missing Factors William Gbohoui, Rasmané Ouedraogo, Yirbehogre Modeste Some, 2023-06-23 Policymakers from the sub Saharan Africa SSA region often flag a mispricing of their sovereign debt presumably originating from a perception risk by international investors that lead to unjustifiably high borrowing costs Against this background this paper explores the extent to which a potential SSA premium exists in the financial markets following a broader two fold approach Firstly using a sample of 1592 international primary sovereign fixed coupon bonds issued between 2003 2021 from Bond Radar by 89 countries we find that SSA countries pay significantly higher coupon at issuance compared to their peers from other regions Secondly we assess whether there is any bias against SSA countries in the secondary market that would result in higher refinancing cost Based on an unbalanced panel of quarterly data covering 107 countries over 1990 2022 we find that SSA countries pay higher refinancing costs in the secondary market The paper further explores whether there are other factors overlooked by the literature that matter for the risk pricing by international investors In that respect we explore the sensitivity of spreads to some structural dimensions where SSA countries face acute challenges the transparency of budget process the importance of the informal sector the level of financial development and the quality of public institutions The results show that the excess premium estimated for SSA countries vanishes when these structural factors are accounted for in the regressions Smart Energy Research. Crypto Wars Craig Jarvis, 2020-12-30 The crypto wars have raged for half a century. In the 1970s digital privacy activists prophesied the emergence of an Orwellian State made possible by computer-mediated mass surveillance. The antidote: digital encryption. The U.S. government warned encryption would not only prevent surveillance of law-abiding citizens but of criminals, terrorists and foreign spies, ushering in a rival dystopian future. Both parties fought to defend the citizenry from what they believed the most perilous threats. The government tried to control encryption to preserve its surveillance capabilities; privacy activists armed citizens with cryptographic tools and challenged encryption regulations in the courts. No clear victor has emerged from the crypto wars. Governments have failed to forge a framework to govern the at times conflicting civil liberties of privacy and security in the digital age, an age when such liberties have an outsized influence on the citizen-State power balance. Solving this problem is more urgent than ever. Digital privacy will be one of the most important factors in how we architect twenty-first century societies; its management is paramount to our stewardship of democracy for future generations. We must elevate the quality of debate on cryptography on how we govern security and privacy in our technology-infused world. Failure to end the crypto wars will result in societies sleepwalking into a future where the citizen-State power balance is determined by a twentieth-century status quo unfit for this century, endangering both our privacy and security. This book provides a history of the crypto wars with the hope its chronicling sets a foundation for peace.
