Making Harvard Modern Morton Keller, Phyllis

Keller, 2001-11-15 Making Harvard Modern is a candid richly detailed portrait of America's most prominent university from 1933 to the present seven decades of dramatic change Early twentieth century Harvard was the country's oldest and richest university but not necessarily its outstanding one By the century's end it was widely regarded as the nation's and the world's leading institution of higher education With verve humor and insight Morton and Phyllis Keller tell the story of that rise a tale of compelling personalities notable achievement and no less notable academic pratfalls Their book is based on rich and revealing archival materials interviews and personal experience Young humbly born James Bryant Conant succeeded Boston Brahmin A Lawrence Lowell as Harvard's president in 1933 and set out to change a Brahmin dominated university into a meritocratic one He hoped to recruit the nation's finest scholars and an outstanding national student body But the lack of new money during the Depression and the distractions of World War Two kept Conant and Harvard from achieving this goal In the 1950s and 1960s during the presidency of Conant's successor Nathan Marsh Pusey Harvard raised the money recruited the faculty and attracted the students that made it a great meritocratic institution America's university The authors provide the fullest account yet of this transformation and of the wrenching campus crisis of the late sixties During the last thirty years of the twentieth century a new academic culture arose meritocratic Harvard morphed into worldly Harvard During the presidencies of Derek Bok and Neil Rudenstine the university opened its doors to growing numbers of foreign students women African and Asian Americans and Hispanics Its administration faculty and students became more deeply engaged in social issues its scientists and professional schools were more ready to enter into shared commercial ventures But worldliness brought its own conflicts over affirmative action and political correctness over commercialization over the ever higher costs of higher education This fascinating account the first comprehensive history of a modern American university is essential reading for anyone with an interest in the present state and future course of higher education

Partners in Science Robert E. Kohler, 1991 Robert Kohler shows exactly how entrepreneurial academic scientists became intimate partners in science with the officers of the large foundations created by John D Rockefeller and Andrew Carnegie and in so doing tells a fascinating story of how the modern system of grant getting and grant giving evolved and how this funding process has changed the way laboratory scientists make their careers and do their work This book is a rich historical tapestry of people institutions and scientific ideas It will stand for a long time as a source of precise and detailed information about an important aspect of the scientific enterprise It also contains many valuable lessons for the coming years John Ziman Times Higher Education Supplement

Particle-accelerator

Decommissioning J. H. Opelka, J.M. Peterson, G.J. Marmer, R.L. Mundis, B. Siskind, M.J. Kikta, 1979 Generic considerations involved in decommissioning particle accelerators are examined There are presently several hundred accelerators operating

in the United States that can produce material containing nonnegligible residual radioactivity Residual radioactivity after final shutdown is generally short lived induced activity and is localized in hot spots around the beam line The decommissioning options addressed are mothballing entombment dismantlement with interim storage and dismantlement with disposal The recycle of components or entire accelerators following dismantlement is a definite possibility and has occurred in the past Accelerator components can be recycled either immediately at accelerator shutdown or following a period of storage depending on the nature of induced activation Considerations of cost radioactive waste and radiological health are presented for four prototypic accelerators Prototypes considered range from small accelerators having minimal amounts of radioactive material to a very large accelerator having massive components containing nonnegligible amounts of induced activation Archival information on past decommissionings is presented and recommendations concerning regulations and accelerator design that will aid in the decommissioning of an accelerator are given **Nugget Coombs** Tim Rowse, 2005-09-27 H C Coombs was one of the most influential Australians of the twentieth century Born in 1906 he is best known as the governor of the Reserve Bank but the breadth of his activities and his commitment to public life until his death is unsurpassed Tim Rowse traces Coombs life from his childhood in Western Australia to his many roles as policy maker change agent advocate and adviser Particularly interested in Coombs as an economist Tim Rowse shows that a key motif in his life as a public servant was to create an economic rationality among the political elite that was socially integrative and that looked beyond the strictures of economics to environmental sustainability scientific and artistic creativity This 2002 book covers Coombs life from birth to death providing intriguing insights into the life of one of Australia's most influential people **The Neutron's Children** Sean Johnston, 2012-04-26 This account tracks the Allied atomic energy experts who emerged from the Manhattan Project to explore optimistic but distinct paths in the USA UK and Canada Characterized successively as admired atomic scientists mistrusted spies and heroic engineers their identities were ultimately shaped by nuclear accidents **The Johnson Years: Vietnam, the environment, and science** Robert A. Divine, 1987 *Madlands* Anna Rose, 2012 The co founder of the Australian Youth Climate Coalition recounts her journey around the world with arch climate skeptic Nick Minchin as they challenged each other's views and provoked each other to confront closely held assumptions **Nuclear Science Abstracts**, 1962

Unveiling the Magic of Words: A Report on "**14 November Physical Science Pmemo**"
