Fundamentals of Electric Aircraft Pascal Thalin,Ravi Rajamani,Jean-Charles Mare,Sven Taubert,2018-12-18

Fundamentals of Electric Aircraft was developed to explain what the electric aircraft stands for by offering an objective view of what can be expected from the giant strides in innovative architectures and technologies enabling aircraft electrification Through tangible case studies a deep insight is provided into this paradigm shift cutting across various aircraft segments from General Aviation to Large Aircraft Addressing design constraints and timelines foreseen to reach acceptable performance and maturity levels Fundamentals of Electric Aircraft puts forward a general view of the progress made to date and what to expect in the years to come Drawing from the expertise of four industry veterans Pascal Thalin editor Ravi Rajamani Jean Charles Mare and Sven Taubert contributors it addresses futuristic approaches but does not depart too far from the operational down to earth realities of everyday business Fundamentals of Electric Aircraft also offers analyses on how performance enhancements and fuel burn savings may bring more value for money as long as new electric technologies deliver on their promises

Condition-Based Maintenance in Aviation Ravi Rajamani,2018-12-11 Condition Based Maintenance in Aviation The History The Business and The Technology describes the history and practice of Condition Based Maintenance CBM systems by showcasing ten technical papers from the archives of SAE International stretching from the dawn of the jet age down to the present times By scientifically understanding how different components degrade during operations it is possible to schedule inspections repairs and overhauls at appropriate intervals so that any incipient failure can be detected well in advance Today this includes more sensors and analytics so that periodic inspections are replaced by automated continuous inspections and analytical methods that detect imminent failures and predict degradation issues more economically and efficiently Similar concepts are also being developed for delivering prognostics functions such as tracking of remaining useful life RUL of life limited parts in aircraft engines The discipline within CBM that deals with this is called

prognostics and health management PHM which covers all aspects of diagnostics and prognostics including modeling of systems and subsystems sensing data transmission storage and retrieval analytical methods and decision making Traditionally nondestructive testing NDT methods have been employed during the major airplane checks to assess structural damage These techniques are enhanced with in situ sensing techniques that can continuously monitor aircraft structures and report on their health The move to condition based assessment of maintenance needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule The trend is clearly to include more CBM functions into Maintenance Repair and Overhaul MRO processes so better cost control can be achieved without ever comprising passenger safety
