Structural Health Monitoring of Large Structures Using Acoustic Emission-Case Histories Kanji Ono, Tomoki Shiotani, Martine Wevers, Marvin A. Hamstad, 2020-11-23 Acoustic emission AE techniques have successfully been used for assuring the structural integrity of large rocket motorcases since 1963 and their uses have expanded to ever larger structures especially as structural health monitoring SHM of large structures has become the most urgent task for engineering communities around the world The needs for advanced AE monitoring methods are felt keenly by those dealing with aging infrastructures Many publications have appeared covering various aspects of AE techniques but documentation of actual applications of AE techniques has been mostly limited to reports of successful results without technical details that allow objective evaluation of the results There are some exceptions in the literature In this Special Issue of the Acoustics section of Applied Sciences we seek contributions covering these exceptions cited here Here we seek contributions describing case histories of AE applications to large structures that have achieved the goals of SHM by providing adequate technical information supporting the success stories Types of structures can include aerospace and geological structures bridges buildings factories maritime facilities off shore structures etc Experiences with AE monitoring methods designed and proven for large stru
