Maybe Teaching is a Bad Idea Larry D. Spence, 2023-07-03 Deep and lasting learning results when we teach human brains in ways responsive to how they're structured and how they function which is not how we imagine they work or wish they would work This book proposes a radical restructuring of teaching so that it conforms to how people learn Spence maintains that teaching cannot and should not be aimed at transferring knowledge from teacher brains into student brains In his words Decades of experience have made perfectly clear that this approach frustrates teachers bores students and results in minimal learning This is a book that challenges it will poke and prod your thinking The author writes near the end of Chapter 4 I wanted to write a book that asked real questions and explored possible answers I am not concerned that you agree with my answers or ideas but I fervently hope the questions I'm raising will lead you to questions about habitual teaching practices and the resulting failure of students to learn

International Handbook of Research in History, Philosophy and Science Teaching Michael R. Matthews,2014-07-03 This

inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique encyclopaedic handbook.
