Analysis of Transport Phenomena William M. Deen, 1998-03-26 Analysis of Transport Phenomena is intended mainly as a text for graduate level courses in transport phenomena for chemical engineers Among the analytical methods discussed are scaling similarity perturbation and finite Fourier transform techniques The physical topics include conduction and diffusion in stationary media fluid mechanics forced and free convection heat and mass transfer and multicomponent energy and mass transfer

Transport Phenomena in Biomedical Engineering Robert A. Peattie, Robert J. Fisher, Joseph D. Bronzino, Donald R. Peterson, 2012-11-20 Design analysis and simulation of tissue constructs is an integral part of the ever evolving field of biomedical engineering The study of reaction kinetics particularly when coupled with complex physical phenomena such as the transport of heat mass and momentum is required to determine or predict performance of biologically based systems wheth

Tissue Engineering II Kyongbum Lee, David L. Kaplan, 2006-10-19 It is our pleasure to present this special volume on tissue engineering in the series Advances in Biochemical Engineering and Biotechnology This volume reflects the emergence of tissue engineering as a core discipline of modern biomedical engineering and recognizes the growing synergies between the technological developments in biotechnology and biomedicine Along this vein the focus of this volume is to provide a biotechnology driven perspective on cell engineering fundamentals while highlighting their significance in producing functional tissues Our aim is to present an overview of the state of the art of a selection of these technologies punctuated with current applications in the research and development of cell based therapies for human disease To prepare this volume we have solicited contributions from leaders and experts in their respective fields ranging from biomaterials and bioreactors to gene delivery and metabolic engineering Particular emphasis was placed on including reviews that discuss various aspects of the biochemical processes underlying cell function such as signaling growth differentiation and communication The reviews of research topics cover two main areas cellular and non cellular components and assembly evaluation and optimization of tissue function and integrated reactor or implant system development for research and clinical applications Many of the reviews illustrate how biochemical engineering methods are used to produce and characterize novel materials e.g genetically engineered natural polymers synthetic scaffolds with cell type specific attachment sites or inductive factors whose unique properties enable increased levels of control over tissue development and architecture
