Electromagnetic Diffraction Modeling and Simulation with MATLAB Gökhan Apaydin, Levent Sevgi, 2021-02-28 This exciting new resource presents a comprehensive introduction to the fundamentals of diffraction of two dimensional canonical structures including wedge strip and triangular cylinder with different boundary conditions Maxwell equations are discussed along with wave equation and scattered diffracted and fringe fields Geometric optics as well as the geometric theory of diffraction are explained With MATLAB scripts included for several well known electromagnetic diffraction problems this book discusses diffraction fundamentals of two dimensional structures with different boundary conditions and analytical numerical methods that are used to show diffraction The book introduces fundamental concepts of electromagnetic problems identities and definitions for diffraction modeling Basic coordinate systems boundary conditions wave equation and Green's function problem are given The scattered fields diffracted fields and fringe fields radar cross section for diffraction modeling are presented Behaviors of electromagnetic waves around the two dimensional canonical wedge and canonical strip are also explored Diffraction of trilateral cylinders and wedges with rounded edges is investigated as well as double tip diffraction using Finite Difference Time Domain and Method of Moments A MATLAB based virtual tool developed with graphical user interface GUI for the visualization of both fringe currents and fringe waves is included using numerical FDTD and MoM algorithm and High Frequency Asymptotics approaches

Metamaterials and Plasmonics: Fundamentals, Modelling, Applications Said Zouhdi, Ari Sihvola, Alexey P. Vinogradov, 2008-12-16 Metamaterials and plasmonics are cross disciplinary fields that are emerging into the mainstream of many scientific areas Examples of scientific and technical fields which are concerned are electrical engineering micro and nanotechnology microwave engineering optics optoelectronics and semiconductor technologies In plasmonics the interplay between propagating electromagnetic waves and free electron oscillations in materials are exploited to create new components and applications On the other hand metamaterials refer to

artificial composites in which small artificial elements through their collective interaction creates a desired and unexpected macroscopic response function that is not present in the constituent materials This book charts the state of the art of these fields In May 2008 world leading experts in metamaterials and plasmonics gathered into a NATO Advanced Research Workshop in Marrakech Morocco The present book contains extended versions of 22 of the presentations held in the workshop covering the general aspects of the field as well as design and modelling questions of plasmonics and metamaterials fabrication issues and applications like absorbers and antennas
