HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure and organization of the human body

Physiology

The study of the function and processes of the human body

Structural levels

How studying the structural levels can help us understand the human body

- 1. Chemical level: study of the chemical composition of the human body
- 2. Cellular level: study of the structure and function of cells
- 3. Tissue level: study of the structure and function of tissues
- 4. Organ level: study of the structure and function of organs
- 5. System level: study of the structure and function of body systems
- 6. Organism level: study of the structure and function of the whole human body

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body

Characteristics of cells

All cells are eukaryotic and have a nucleus

Cells are specialized for their function

Cells are surrounded by a cell membrane

Cells are connected to each other

Cells are constantly changing

The tissue is the group of cells that work together to perform a specific function

Types of cells

Epithelial cells: cover the body and line internal organs

Connective tissue: support and connect other cells

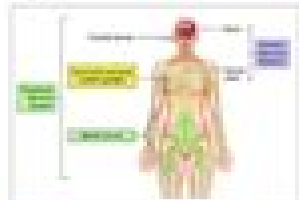

Muscle cells: contract and move the body

Nerve cells: transmit information

NERVOUS SYSTEM

Functions

- 1. Sensory: receive information from the environment
- 2. Integrative: process information and make decisions
- 3. Motor: control the response of the body

Structure

The nervous system is composed of the brain and the spinal cord

The brain is the control center of the body

The spinal cord is the communication pathway between the brain and the rest of the body

Nerves are bundles of axons that carry information

Neurons are the basic units of the nervous system

UNIT OF MEASUREMENT

The unit of measurement for length is the meter

Types of neurons

Sensory neurons: carry information from the receptors to the brain

Motor neurons: carry information from the brain to the effectors

Interneurons: carry information between sensory and motor neurons

Glial cells: support and protect neurons

Neurotransmitters: chemical messengers that carry information

Receptors: detect changes in the environment

Effectors: respond to the information received

Feedback loops: maintain balance in the body

Homeostasis: the state of balance in the body

Adaptation: the ability to change in response to the environment

Evolution: the process of change over time

Genetics: the study of heredity

Development: the process of growth and maturation

Physiology: the study of function

Anatomy: the study of structure

Pathology: the study of disease

Pharmacology: the study of drugs

ORGAN SYSTEMS OF THE BODY

The body is composed of several organ systems that work together to maintain life

The digestive system is responsible for breaking down food into nutrients

The circulatory system is responsible for transporting blood throughout the body

The respiratory system is responsible for exchanging gases with the environment

The excretory system is responsible for removing waste from the body

The reproductive system is responsible for producing offspring

The immune system is responsible for defending the body against disease

The endocrine system is responsible for regulating the body's internal environment

The nervous system is responsible for controlling the body's activities

The muscular system is responsible for movement

The skeletal system is responsible for support and protection

The integumentary system is responsible for covering the body

The lymphatic system is responsible for fluid balance and immunity

The urinary system is responsible for filtering blood and excreting urine

The reproductive system is responsible for producing and nurturing offspring

The endocrine system is responsible for regulating the body's internal environment

The nervous system is responsible for controlling the body's activities

The muscular system is responsible for movement

The skeletal system is responsible for support and protection

The integumentary system is responsible for covering the body

The lymphatic system is responsible for fluid balance and immunity

The urinary system is responsible for filtering blood and excreting urine

The reproductive system is responsible for producing and nurturing offspring

The endocrine system is responsible for regulating the body's internal environment

The nervous system is responsible for controlling the body's activities

ENDOCRINE SYSTEM

- 1. Hypothalamus: controls the pituitary gland
- 2. Pituitary gland: controls the growth, development, and metabolism of the body
- 3. Thyroid gland: controls the metabolism of the body
- 4. Parathyroid glands: control the calcium levels in the blood
- 5. Adrenal glands: control the stress response
- 6. Pancreas: controls the blood sugar levels
- 7. Gonads: control the reproductive functions

Functions of the endocrine system

Regulate the body's internal environment

Control the growth and development of the body

Maintain the balance of fluids and electrolytes

Control the metabolism of the body

Control the blood sugar levels

Control the stress response

Control the reproductive functions

Control the calcium levels in the blood

Control the blood pressure

Control the body temperature

Control the immune response

Control the sleep-wake cycle

Control the appetite

Control the mood

Control the memory

Control the learning

Control the personality
