Rethinking Sequentiality Anita Fetzer, Christiane Meierkord, 2002-01-01 This book addresses current approaches to sequentiality in pragmatics and discourse analysis It reflects the current moves in ethnomethodological conversation analysis and speech act theory to cross methodological borders to arrive at a conception of a sequence which extends the local notion of sequentiality by integrating further constitutive components such as cognition intentionality activity type culture and genre The individual contributions were presented at the 7th IPrA Conference held in Budapest in the year 2000 They range from critical analyses of speech act theory and cognitive pragmatics to detailed micro analyses of genre and activity specific constraints on the production and interpretation of meaning The first part sequences in theory and practice minimal and unbounded discusses the theoretical premises and exemplifies these by detailed data analyses The second part sequences in discourse the micro macro interface examines genre specific constraints on individual sequences and shows the benefits of supplementing the microanalytic concept of sequentiality with macroanalytic categories

Mathematical Principles of Human Conceptual Behavior Ronaldo Vigo, 2014-10-03 The ability to learn concepts lies at the very core of human cognition enabling us to efficiently classify organize identify and store complex information In view of the basic role that concepts play in our everyday physical and mental lives the fields of cognitive science and psychology face three long standing challenges discovering the laws that govern concept learning and categorization behavior in organisms showing how they inform other areas of cognitive research and describing them with the mathematical systematicity and precision found in the physical sciences In light of these theoretical and methodological shortcomings this volume will introduce a set of general mathematical principles for predicting and explaining conceptual behavior The author s theory is based on seven fundamental constructs of universal science invariance complexity information similarity dissimilarity pattern and representation These constructs are joined by a

novel mathematical framework that does not depend on probability theory and derives key results from conceptual behavior research with other key areas of cognitive research such as pattern perception similarity assessment and contextual choice The result is a unique and systematic unifying foundation for cognitive science in the tradition of classical physics
