Massively Parallel Evolutionary Computation on GPGPUs Shigeyoshi Tsutsui, Pierre Collet, 2013-12-05 Evolutionary algorithms EAs are metaheuristics that learn from natural collective behavior and are applied to solve optimization problems in domains such as scheduling engineering bioinformatics and finance Such applications demand acceptable solutions with high speed execution using finite computational resources Therefore there have been many attempts to develop platforms for running parallel EAs using multicore machines massively parallel cluster machines or

grid computing environments Recent advances in general purpose computing on graphics processing units GPGPU have opened up this possibility for parallel EAs and this is the first book dedicated to this exciting development The three chapters of Part I are tutorials representing a comprehensive introduction to the approach explaining the characteristics of the hardware used and presenting a representative project to develop a platform for automatic parallelization of evolutionary computing EC on GPGPUs The 10 chapters in Part II focus on how to consider key EC approaches in the light of this advanced computational technique in particular addressing generic local search tabu search genetic algorithms differential evolution swarm optimization ant colony optimization systolic genetic search genetic programming and multiobjective optimization The 6 chapters in Part III present successful results from real world problems in data mining bioinformatics drug discovery crystallography artificial chemistries and sudoku Although the parallelism of EAs is suited to the single instruction multiple data SIMD based GPU there are many issues to be resolved in design and implementation and a key feature of the contributions is the practical engineering advice offered This book will be of value to researchers practitioners and graduate students in the areas of evolutionary computation and scientific computing

Maloney, 2020-07-01 King of the Cold War crisis

film *Dr Strangelove* became a cultural touchstone from the moment of its release in 1964. The duck and cover generation saw it as a satire on nuclear issues and Cold War thinking. Subsequent generations removed from the film's historical moment came to view it as a quasi documentary about an unfathomable secret world. Sean M Maloney uses *Dr Strangelove* and other genre classics like *Fail Safe* and *The Bedford Incident* to investigate a curious pop cultural contradiction. Nuclear crisis films repeatedly portrayed the failures of the Cold War's deterrent system. Yet the system worked. What does this inconsistency tell us about the genre? What does it tell us about the deterrent system for that matter? Blending film analysis with Cold War history, Maloney looks at how the celluloid crises stack up against reality or at least as much of reality as we can reconstruct from these films with confidence. The result is a daring intellectual foray that casts new light on *Dr Strangelove*, one of the Cold War era's defining films.

Brain Power Michael Gelb, Kelly Howell, 2012 Drawing on the knowledge of physicians, gerontologists and neuroscientists as well as the habits of men and women who epitomize healthy aging, helps readers activate unused brain areas, tone mental muscles and enliven every mental faculty.

Tools of War, Tools of State Robert Tynes, 2018-09-01 Examines why many governments, rebels and terrorist organizations are using children as soldiers. Despite the supposed taboo against the practice, many governments, rebels and terrorist groups use children in war to spy and kill. In *Tools of War, Tools of State*, Robert Tynes examines this complex problem, demonstrating that the modern use of children in war is a tactical innovation. He discusses how boys and girls on the battlefield bolster troop size, create moral dilemmas and deepen the level of fear. He also reveals how the practice has become an essential component for groups such as ISIS and al Shabaab in their state-making projects. Using statistical methods to analyze conflicts from 1987 to 2007, Tynes shows how widespread child soldier use is and confirms the theory that it is tactically advantageous. Through historical analysis, he explains how child soldiering developed out of Mao's protracted war theory and the militarization of youth during the twentieth century. A case study of the civil war in Sierra Leone, which details the brutality involved when children are forced to fight, is included.

Reverse Osmosis Jane Kucera, 2011-09-20 The most comprehensive and up to date coverage of reverse osmosis in industrial applications. Reverse osmosis is rapidly growing as a water treatment technology used for many applications such as boiler feed water and recovering wastewater for reuse. This green technology is becoming more and more widely used in many settings, especially in industry. This outstanding reference provides a comprehensive and thorough coverage of reverse osmosis technology. Discusses fundamental processes and equipment for operating and troubleshooting a reverse osmosis system such as reverse osmosis principles, membrane technology and flow patterns. Covers more advanced engineering topics for specific industrial applications such as system design. Features clear, concise language written in easy-to-understand language, providing engineers immediate ability to implement a reverse osmosis program.
