

Activity A:
Observing cells

Get the Gizmo ready:

- On the LANDSCAPE tab, click on the woman's right arm to choose the **Human skin** sample.
- Select the **MICROSCOPE** tab.

Introduction: Complex organisms are made up of smaller units, called cells. Most cells are too small to be seen by the naked eye. Microscopes are used to magnify small objects, so here you will use a **compound light microscope** to observe the cells of different organisms.

Question: What are similarities and differences between cells from different organisms?

1. Match: Read about each microscope part. Match the description to the part on the diagram.

___ **B Stage:** Platform where a slide is placed.

___ **A Eye piece:** Lens at the top of the microscope that the user looks through. This lens most commonly magnifies a sample by 10x.

___ **C Coarse focus knob:** Large knob that moves the stage up and down to focus the sample.

___ **D Fine focus knob:** Small knob that moves the stage over a short distance to refine the focus.

___ **E Objective lens:** A second lens that further magnifies the sample. Microscopes usually have several objective lenses with different magnifications. The total magnification is the product of the eyepiece magnification and the objective lens magnification.

___ **F Slide:** A rectangular piece of glass upon which a sample is mounted for viewing under a microscope.

2. Manipulate: With 40x selected, use the **Coarse** and **Fine focus** sliders to focus on the sample. Then, choose 400x and focus on the sample using the **Fine focus** slider.

A. Which focus knob is easier to use at 40x? _____ 400x? _____

Answer: For me, all knobs are easier to use even if it is at 40x or 400x magnification. (Thanks to our professor's instruction I managed to use it accordingly.)

B. Turn on **Show labels**. What structures can you see in human skin cells?

Answer: I see nucleus, cytoplasm, and cell membrane.

Exploring the Key Targets and Compounds That Manipulate Brain Neurocircuits Against Mental Disorders and Psychiatric, volume II Weijie Xie, Zezhi Li, Yuan Li, Song Zhang, Dereje Kebebe Borga, Yuwei Wang, 2025-08-26 With the development of brain science modulating neural circuits and brain networks is increasingly being considered a treatment for neurological disorders Neurological disorders can be precisely alleviated or reversed using optogenetic techniques and analysis of neural circuits and this also illustrates the shortcomings of traditional pharmacological manners that target single molecular targets such as GABA receptors with anti anxiety and 5 HT receptors with antidepressants While traditional psychotropic drugs are generally developed based on a single molecular target modulating neural circuits and neural networks by neuropharmacology approaches is a challenge that pharmacology must focus on and cope with in the future A recent study in Science Trieu et al Science 375 1177 1182 2022 has provided a novel insight into the precise regulation of the neural circuit and brain network functions Small molecular compounds enable the manipulation of brain neurocircuits and networks targeting the enriched molecules or receptors thereby treating mental diseases Therefore we aim to explore the interactions between neural circuits and

Cerebellar Dentate Nucleus V. Chan-Palay,2013-12-20 Recent physiologic investigations have shown that the deep cerebellar nuclei may play an important role in the initiation and monitoring of skilled move ments Much of this physiologic work has been carried out in the absence of a secure foundation in neuroanatomical information Although the main sources of the afferent fibers and the major terminations of the efferent fibers related to these nuclei have been known for many years remarkably little information about the organization of the nuclei themselves has been collected The kinds of nerve cells their arrangement within the nuclei the patterns of their dendritic arborizations the distribution of incoming fibers among the neurons the relationship between the outgoing nerve fibers and the nerve cells from which they originate these and many other morphologic features were either unknown or only superficially explored In fact so little was known about the deep cerebellar nuclei when I began to work on this subject that the investigations reported here are virtually without antecedents a refreshing change from the cerebellar cortex which has been repeatedly and exhaustively surveyed My studies on the cerebellar nuclei began in the spring of 1972 They were initiated with the intent of applying the principles of analysis that had been developed for the cerebellar cortex to a different but related part of the brain **Concepts and Applications**
