More I'm Through! What Can I Do?, Gr. 3, eBook Regina Kim, *Cooperative search for moving targets with the ability to perceive and evade using multiple UAVs* Ziyi Wang, Wencheng Zou, Sheng Li, 2023-10-28 This paper focuses on the problem of regional cooperative search using multiple unmanned aerial vehicles UAVs for targets that have the ability to perceive and evade When UAVs search for moving targets in a mission area the targets can perceive the positions and flight direction of UAVs within certain limits and take corresponding evasive actions which makes the search more challenging than traditional search problems To address this problem we first define a detailed motion model for such targets and design various search information maps and their update methods to describe the environmental information based on the prediction of moving targets and the search results of UAVs We then establish a multi UAV search path planning optimization model based on the model predictive control which includes various newly designed objective functions of search benefits and costs We propose a priority encoded improved genetic algorithm with a fine adjustment mechanism to solve this model The simulation results show that the proposed method can effectively improve the cooperative search efficiency and more targets can be found at a much faster rate compared to traditional search methods
