5. A machine gun fires 10 rounds per second.
The speed of the bullets is 300 m/s.

speed (1)
 $300 (1/10) = 30m$

- a. What is the distance in the air between the flying bullets? 30m
b. What happens to the distance between the bullets if the rate of fire is increased?

distance would decrease

6. Consider a wave generator that produces 10 pulses per second. The speed of the waves is 300 cm/s.

- a. What is the wavelength of the waves? _____
b. What happens to the wavelength if the frequency of pulses is increased?

7. The bird at the right watches the waves. If the portion of a wave between 2 crests passes the pole each second,

- a. what is the speed of the waves? _____
b. what is the period of wave motion? _____
c. If the distance between crests were 1.5 meters apart, and 2 crests pass the pole each second, what would be the speed of the wave?

- d. What would the period of wave motion be for 7 c ?

Advanced Classical Electromagnetism Robert Wald, 2022-03-22 This is a concise beginning graduate level textbook on classical electromagnetism the branch of physics that describes the interaction of electric currents or fields and magnetic fields Electromagnetism also called electrodynamics is one of the pillars of modern physics and as such of the modern physics curriculum with courses on electromagnetism required at the undergraduate and graduate levels These courses traditionally proceed in a quasi historical fashion starting from equations and laws that were first formulated in the eighteenth and nineteenth centuries and still form the foundations of our understanding of electromagnetism However as Robert Wald argues teaching in this way can be imprecise and tends to promote outdated ways of thinking about the subject This book rethinks how electromagnetism is presented at the graduate level offering a corrective that aims to bring teaching up to date with our more modern understanding of the topic The book begins by debunking four common misconceptions or myths that can hinder a deep conceptual understanding of electromagnetism Wald then proceeds through the major topics first year grad courses and textbooks in electromagnetism typically cover including electrostatics dielectrics magnetostatics electrodynamics geometric optics special relativity gauge theory and point charge Wald's aim throughout is to explain to students how to think about electromagnetism from a modern and mathematically precise perspective formulating all the key conceptual ideas and results in the field clearly and concisely while forgoing extensive collections of examples and applications The book could be used as the basis for or as a supplement to a course or for self study by students seeking a deeper understanding than traditional courses and books offer

Deep Learning in Introductory Physics Mark J. Lattery, 2016-10-01 Deep Learning in Introductory Physics Exploratory Studies of Model Based Reasoning is concerned with the broad question of how students learn physics in a model centered classroom The diverse creative and sometimes unexpected ways students construct models and deal with intellectual conflict provide valuable insights into student learning and cast a new vision for physics teaching This book is the first publication in several years to thoroughly address the coherence versus fragmentation debate in science education and the first to advance and explore the hypothesis that deep science learning is regressive and revolutionary Deep Learning in Introductory Physics also contributes to a growing literature on the use of history and philosophy of science to confront difficult theoretical and practical issues in science teaching and addresses current international concern over the state of science education and appropriate standards for science teaching and learning The book is divided into three parts Part I introduces the framework agenda and educational context of the book An initial study of student modeling raises a number of questions about the nature and goals of physics education Part II presents the results of four exploratory case studies These studies reproduce the results of Part I with a more diverse sample of students under new conditions a public debate peer discussions and group

interviews and with new research prompts model building software bridging tasks and elicitation strategies Part III significantly advances the emergent themes of Parts I and II through historical analysis and a review of physics education research ENDORSEMENTS In *Deep Learning in Introductory Physics* Lattery describes his extremely innovative course in which students ideas about motion are elicited evaluated with peers and revised through experiment and discussion The reader can see the students deep engagement in constructive scientific modeling while students deal with counter intuitive ideas about motion that challenged Galileo in many of the same ways Lattery captures students engaging in scientific thinking skills and building difficult conceptual understandings at the same time This is the double outcome that many science educators have been searching for The case studies provide inspiring examples of innovative course design student sensemaking and reasoning and deep conceptual change John Clement University of Massachusetts Amherst Scientific Reasoning Research Institute *Deep Learning in Introductory Physics* is an extraordinary book and an important intellectual achievement in many senses It offers new perspectives on science education that will be of interest to practitioners to education researchers as well as to philosophers and historians of science Lattery combines insights into model based thinking with instructive examples from the history of science such as Galileo s struggles with understanding accelerated motion to introduce new ways of teaching science The book is based on first hand experiences with innovative teaching methods reporting student s ideas and discussions about motion as an illustration of how modeling and model building can help understanding science Its lively descriptions of these experiences and its concise presentations of insights backed by a rich literature on education cognitive science and the history and philosophy of science make it a great read for everybody interested in how models shape thinking processes Dr J rgen Renn Director Max Planck Institute for the History of Science
