The chapters cover a multitude of themes and some of the most important legal issues arising in relation to biotechnology, including the historical development of a legal framework sufficient to protect public safety, the current biotechnology regulatory system, and the rules directing the primary agencies that regulate the products of biotechnology, namely the US Food and Drug Administration, the US Department of Agriculture, and the US Environmental Protection Agency. Patents and IP rights in biotechnology, the regulation of human genome editing and its impact on health research, law and emerging genome editing technologies from recombinant DNA to CRISPR-Cas9, the development of legal principles to protect property rights in the human body and allow the efficient use of human tissue organs, DNA and cell lines in medical research, and legal issues arising from the use of genetic engineered plants and animals. Presenting arguments that have been drawn from careful examination of various international documents and decisions made by legal institutions and judicial bodies, this book would be a valuable read for practitioners as well as academics of biotechnology law.
