Upgrading Physics Education to Meet the Needs of Society Maurício Pietrocola, 2019-02-19 Nations around the globe consider physics education an important tool of economic and social development and currently advocate the use of innovative strategies to prepare students for knowledge and skills acquisition. Particularly in the last decade a series of revisions were made to physics curricula in an attempt to cope with the changing needs and expectations of society. Educational transformation is a major challenge due to educational systems' resistance to change. Updated curriculum content, pedagogical facilities for example computers in a school, new teaching and learning strategies and the prejudice against girls in physics classes are all issues that have to be addressed. Educational research provides a way to build schemas and resources to promote changes in physics education. This volume presents physics teaching and learning research connected with the main educational scenarios.

Conceptual Developments of 20th Century Field Theories Tian Yu Cao, 1998-05-14 This book gives a broad synthesis of conceptual developments of twentieth century field theories from the general theory of relativity to quantum field theory and gauge theory. The author gives a historical critical exposition of the conceptual foundations of the theories revealing a pattern to the evolution of these conceptions. Theoretical physicists and students of theoretical physics will find in this book an account of the foundational problems of their discipline that will help them understand the internal logic and dynamics of their subject. In addition the book will provide professional historians and philosophers of science and especially philosophers of physics with a conceptual basis for further historical, cultural and sociological analysis of the theories discussed. The book also contains much material for philosophical, metaphysical, methodological and semantical reflection. Finally the scientifically qualified general reader will find in this book a deeper analysis of contemporary conceptions of the physical world than can be found in popular accounts of the subject.

Chemical Education: Towards Research-based Practice J.K. Gilbert, Onno de Jong, Rosária Justi, David F. Treagust, Jan H. van Driel, 2006-03-11 Chemical education is essential to everybody because it deals with ideas that play major roles in personal, social and economic decisions. This book is based on three principles that all aspects of chemical education should be associated with research that the development of opportunities for chemical education should be both a continuous process and be linked to research and that the professional development of all those associated with chemical education should make extensive and diverse use of that research. It is intended for pre-service and practising chemistry teachers and lecturers, chemistry teacher educators, chemical education researchers, the designers and managers of formal chemical curricula, informal chemical educators, authors of textbooks and curriculum support materials, practising chemists and chemical technologists. It addresses the relation between chemistry and chemical education, curricula for chemical education, teaching and learning about chemical compounds and chemical change, the development of teachers, the development of chemical education as a field of enquiry.
