I coordinated with various teams to ensure minimal downtime and trained staff on using the new cloud based tools. The project improved our scalability and reduced our infrastructure costs by 30%.

How do you prioritize tasks when you have multiple deadlines?

Answer I prioritize tasks based on their urgency and impact. I use tools like Trello or Jira to manage my tasks and deadlines. For critical projects, I break them down into smaller manageable tasks and focus on completing high priority items first. Effective communication with my team also ensures we're aligned on priorities and deadlines.

How do you handle working under pressure?

Answer I stay calm and focused by breaking down the problem into smaller tasks and tackling them one at a time. I also prioritize tasks and delegate when possible. Taking short breaks to clear my mind helps me stay productive. Communicating effectively with my team and stakeholders ensures everyone is aware of progress and any potential delays.

Scenario Based Questions

You discover a critical security vulnerability in a deployed application. What steps do you take?

Answer First, I would assess the vulnerability's impact and severity. Then, I would notify relevant stakeholders and work with the development team to develop and test a patch. If necessary, I would take immediate action to mitigate the risk, such as temporarily disabling the affected feature. After deploying the patch, I would conduct a thorough review to ensure the issue is resolved and update our security protocols to prevent future vulnerabilities.

How would you handle a situation where a key project is falling behind schedule?

Answer I would first analyse the reasons for the delay by reviewing the project plan and speaking with team members. I would then identify critical tasks and reallocate resources or adjust priorities to get back on track. Communicating with stakeholders about the delay and the steps being taken to address it is crucial. If necessary, I would also consider extending deadlines or bringing in additional help to ensure the project's success.

Technical Test Problem Solving

Each service would be containerized using Docker and managed with Kubernetes for orchestration. I would use a load balancer to distribute traffic evenly and ensure high availability. Data storage would be handled by a combination of relational and NoSQL databases depending on the requirements. For scaling, I would use auto scaling groups and implement caching mechanisms like Redis or Memcached to reduce database load.
