Pando, Luis F. Ramos, 2018-08-18 This volume contains the proceedings of the 11th International Conference on Structural Analysis of Historical Constructions SAHC that was held in Cusco Peru in 2018. It disseminates recent advances in the areas related to the structural analysis of historical and archaeological constructions. The challenges faced in this field show that accuracy and robustness of results rely heavily on an interdisciplinary approach where different areas of expertise from managers, practitioners and scientists work together. Bearing this in mind, SAHC 2018 stimulated discussion on the new knowledge developed in the different disciplines involved in analysis, conservation, retrofit and management of existing constructions. This book is organized according to the following topics: assessment and intervention of archaeological heritage; history of construction and building technology; advances in inspection and NDT; innovations in field and laboratory testing applied to historical construction and heritage; new technologies and techniques; risk and vulnerability assessments of heritage for multiple types of hazards; repair, strengthening and retrofit of historical structures; numerical modeling and structural analysis; structural health monitoring; durability and sustainability; management and conservation strategies for heritage structures and interdisciplinary projects and case studies. This volume holds particular interest for all the community interested in the challenging task of preserving existing constructions, enable great opportunities and also uncover new challenges in the field of structural analysis of historical and archaeological constructions. **Experimental Vibration**

Seismic Design and Assessment of Bridges Andreas J. Kappos, M. Saïid Saiidi, M. Nuray Aydinoglu, Tatjana Isaković, 2012-04-18 The book focuses on the use of inelastic analysis methods for the seismic assessment and design of bridges for which the work carried out so far albeit interesting and useful is nevertheless clearly less than that for buildings Although some valuable literature on the subject is currently available the most advanced inelastic analysis methods that emerged during the last decade are currently found only in the specialised research oriented literature such as technical journals and conference proceedings Hence the key objective of this book is two fold first to present all important methods belonging to the aforementioned category in a uniform and sufficient for their understanding and implementation length and

to provide also a critical perspective on them by including selected case studies wherein more than one methods are applied to a specific bridge and by offering some critical comments on the limitations of the individual methods and on their relative efficiency The book should be a valuable tool for both researchers and practicing engineers dealing with seismic design and assessment of bridges by both making the methods and the analytical tools available for their implementation and by assisting them to select the method that best suits the individual bridge projects that each engineer and or researcher faces
